

Introduction to AI in Simple Language

A friendly, practical start for daily life, work, and education. Today we learn what AI is, what generative AI can create, and how to spot useful AI moments around us.

Beginner-friendly

Demo-based

Hands-on

No coding needed

By the end, you can explain AI in simple words.

No heavy terms today. You will connect AI to tasks you already do, then leave with examples you can actually try.

10m Warm-up: where have you already met AI?

25m Games: AI or not, myths, AI Quest

30m Try together: explain, rewrite, format, localize

35m Hands-on: build your personal AI task list

10m Share, feedback, and homework

● ● ● STARTER ACTIVITY

AI is already in the room.

Raise your hand if you have used one of these. Click any example to see the simple AI idea behind it.

YouTube or Netflix suggestions

Google Maps traffic

Phone autocorrect

Email spam filter

Phone camera portrait mode

Click an example to reveal the simple AI idea behind it.

Friendly definition

AI is software that can find patterns, make predictions, or create helpful output from examples and instructions.

Patterns

Predictions

Creation

Assistance

AI is like a very fast pattern helper.

1. It receives input

Words, images, files, numbers, voice, or instructions from a person.

2. It compares patterns

It uses what it learned from data to predict useful next steps.

3. It gives output

Answer, summary, draft, image idea, table, plan, or slide outline.

Generative AI creates new content from your instructions.

It can draft, rewrite, summarize, design, brainstorm, explain, and produce first versions. The human still decides what is correct, useful, respectful, and ready.

Text

Emails, lesson plans, notices, quiz questions, summaries, reports.

Images

Posters, visual ideas, presentation graphics, concept art.

Slides

Outlines, full decks, speaker notes, story flow, visual prompts.

Audio

Voiceover scripts, podcast outlines, pronunciation practice.

Video

Scripts, scenes, captions, storyboard plans, short-form ideas.

Data

Tables, formulas, charts, dashboard ideas, cleanup suggestions.

Chatbots are conversation-based AI assistants.

They respond to prompts, remember the recent conversation, accept follow-up questions, and can change tone, format, or level when asked.

ChatGPT

Claude

Gemini

Microsoft Copilot

These are common AI assistants you may hear about.

Tool	Simple use	Try this first
ChatGPT	General assistant for writing, explaining, planning, and creativity.	Ask it to explain AI for a teacher, parent, or office team.
Claude	Helpful for long-form writing and careful rewriting.	Rewrite a long paragraph into a simple notice.
Gemini	Useful for Google-style workflows and everyday research support.	Plan a short class activity or organize ideas.
Copilot	Useful inside Microsoft work: Word, PowerPoint, Excel, Outlook.	Draft a formal email or meeting summary.

AI or not AI?

Vote first. Then click the answer. The goal is discussion, not trick questions.

Example: A calculator gives $15 \times 8 = 120$.

AI

Not AI

Choose one answer.

Example: Email suggests "Thanks, I will check and reply soon."

AI

Not AI

Choose one answer.

AI Quest Challenge

Six quick rounds about Day 1 ideas. Play solo, in pairs, or as a room vote.
Wrong answers still teach, so read the tip before the next round.

- Topics: AI vs tools, generative AI, chatbots, myths, safe use
- +10 points per correct answer, +5 streak bonus after 2 in a row

Click each myth to reveal a better reality.

Myth: AI knows everything.

Click to flip.

Myth: AI will replace every job.

Click to flip.

Myth: Prompts must be technical.

Click to flip.

Myth: AI output is ready to submit.

Click to flip.

D

Daily life

- Plan a weekly routine
- Explain a confusing message
- Compare travel options
- Create a shopping checklist

W

Work

- Draft emails and notices
- Summarize meeting notes
- Prepare reports and proposals
- Turn data into charts

E

Education

- Create lesson outlines
- Generate quizzes and rubrics
- Explain topics at different levels
- Make worksheets and slides

Watch one idea become more useful step by step.

Start with a simple prompt. Then add audience, place, format, and a human check. Each step makes the answer easier to use.

Explain

Rewrite

Format

Localize

Try-along prompt sequence

1. Explain generative AI to a beginner in 5 bullet points.
2. Now make it suitable for teachers and office staff in Nepal.
3. Give 5 examples where AI can save 15 minutes per day.
4. Turn the answer into a table with task, AI help, and human check.

Make a weak prompt stronger.

Work with a partner. Choose the missing detail that would improve this prompt the most.

Weak prompt

Make a notice about the workshop.

What should we add first?

Only make it short

Audience and purpose

Add many emojis

Pick one answer.

Stronger prompt

Write a short friendly notice for students attending today's AI workshop. Include time, what to bring, and one line that makes beginners feel welcome.

Build a beginner prompt.

Role

You are a friendly AI trainer

Task

explain what generative AI is

Context

for teachers, office staff, and beginners

Format

5 simple bullet points with examples

Tone

warm, simple, and practical

Generated prompt

You are a friendly AI trainer.

Your task is to explain what generative AI is.

Context: for teachers, office staff, and beginners.

Please respond in this format: 5 simple bullet points with examples.

Tone: warm, simple, and practical.

Copy prompt

Reset

● ● ● RESPONSIBLE USE STARTER

Do not share private data

Passwords, personal IDs, confidential school or office records, private student details.

Check facts

AI can sound confident while being wrong. Verify names, dates, numbers, laws, and policies.

Edit the output

Make the answer match your audience, local context, and real purpose.

Use human judgment

AI supports decisions. It should not be the only decision-maker for important matters.

List 5 tasks where AI can help you.

Choose from personal life, work, school, teaching, design, documents, or planning.
Be specific: "make a Grade 8 lesson plan" is better than "education."

Specific task

AI help

Human check

1. Example: Draft a weekly class notice

2. Example: Summarize a meeting

3. Example: Create quiz questions

4. Example: Plan a family budget table

5. Example: Make a poster idea

Save list

Copy list

Clear

Your list stays in this browser after saving.

Turn task ideas into better AI use cases.

Share one task with a partner. Improve it together using these three questions.

What is the exact output?

Email, table, slide outline, checklist, quiz, poster copy, or plan?

What context matters?

Audience, class level, office role, language, deadline, format, constraints.

What must a human check?

Facts, privacy, tone, fairness, school or office rules, final quality.

AI is a practical assistant, not magic.

It helps with drafts, ideas, summaries, organization, and creative starting points. The person using it stays responsible for the final result.

Celebrate completion

Print / Save PDF

Homework before Day 2

1. Finalize your list of 5 AI-helpful tasks.
2. Pick one task you want to try with a chatbot.
3. Bring one "bad prompt" and one "better prompt" idea.

You do not need to become an AI engineer. You are learning to become a more confident teacher, professional, and creator with AI support.

Prompt Engineering in Simple Words

Today you learn how to give AI clearer instructions, improve weak prompts, ask follow-up questions, and build your own prompt library.

No coding

Many examples

Prompt games

Ready-to-use output

Today's promise

Better prompts give better first drafts.
Better follow-ups give better final
answers.

Today: prompt, test, improve

Your output: 10 useful prompts

Today is about clarity, not clever words.

A prompt is simply your instruction to AI. We will practise making instructions clear, specific, safe, and useful.

1. Notice

Spot why some prompts fail
and some work.

2. Build

Use Role + Task + Context +
Format + Tone.

3. Improve

Use follow-ups, chaining,
peer swaps, and safety
checks.

● ● ● QUICK RECAP

Before prompting, remember what AI is good at.

Click the task where AI can usually help. Then discuss what a human must still check.

Draft a notice

Plan an event

Upload private student records

Create quiz questions

Click one option.

Day 1 reminder

AI is a practical assistant, not magic. You stay responsible for the final work.

Weak prompt

Write about AI.

- No audience
- No purpose
- No format
- No level or tone

Stronger prompt

You are a friendly trainer. Explain generative AI to beginner teachers in Nepal. Use 5 simple bullet points, one classroom example, and a warm tone.

- Clear role
- Specific task
- Useful context
- Requested format and tone

Use five ingredients for a clearer prompt.

R

Role

Who should AI act as?

Example: friendly trainer

T

Task

What should AI do?

Example: draft a notice

C

Context

Who is it for and why?

Example: Grade 9 students

F

Format

How should it look?

Example: 5 bullets, table, email

T

Tone

How should it sound?

Example: simple and respectful

Which ingredient is missing?

Prompt: "Explain photosynthesis in 5 bullet points."

Format

Audience / context

Task

Choose one answer.

Improved version

Explain photosynthesis to Grade 7 students in 5 simple bullet points. Use one everyday example and avoid difficult science words.

Fix the weak prompt.

Weak prompt

Make a report.

Work with a partner. What detail would you add first?

Pick the best first improvement

Say "make it short"

Add topic and audience

Add polite tone

Choose one answer.

Stronger prompt

You are an office assistant. Create a one-page monthly attendance report for the school principal. Use a short summary, a table of key numbers, and 3 action points.

Prompt Clinic: What is missing?

Ten quick cases. Each case shows a weak prompt. Students choose what to improve first, then compare with a demo stronger prompt.

10 questions

Pair discussion

Demo improvements

Safe prompting

Start clinic

How to play

1. Read the weak prompt.
2. Vote: what is missing or weak?
3. Read the improved demo prompt.
4. Say one extra improvement aloud.

Same message, different tone.

MESSAGE

Please attend tomorrow's AI workshop on time and bring your notebook.

TONE

Friendly

Transform

Prompt to use

Rewrite this message in a friendly and easy to understand tone.

Message: Please attend tomorrow's AI workshop on time and bring your notebook.

Keep the meaning the same. Do not add private information.

The first answer is not the final answer.

Good AI users keep improving the answer. Follow-up prompts are where the real value appears.

Make it simpler

"Rewrite this for beginners using daily-life examples."

Change the format

"Turn this into a table with task, AI help, and human check."

Improve quality

"Find gaps, improve clarity, and ask me 3 questions before finalizing."

For bigger work, use small connected steps.

1

Plan

Ask for an outline or checklist first.

2

Draft

Ask AI to create the first version.

3

Review

Ask AI to find gaps, errors, and missing details.

4

Polish

Ask for final tone, format, and clarity.

Example chain: plan a lesson - draft worksheet - make quiz - create answer key - check difficulty.

Ask AI to improve its own answer.

This is simple and powerful. You can ask AI to act like an editor, reviewer, teacher, or audience member.

Find gaps

Ask questions

Improve clarity

Check tone

Copy-ready follow-up prompts

1. Review your answer and list 3 ways to improve it.
2. Ask me 3 questions before writing the final version.
3. Make the answer simpler, shorter, and more practical.
4. Check if anything might be wrong or unsupported.

● ● ● RESPONSIBLE PROMPTING

Do not paste private data

Names, IDs, passwords, marks, salaries, private files, or confidential records.

Use placeholders

Replace real names with Student A, Client B, or Department X.

Check facts

Verify dates, numbers, laws, policies, and formal claims.

Own the result

AI can draft. You review, edit, and take responsibility.

Prompt Pro Challenge

Six quick rounds. Pick the better prompt move. Play solo, in pairs, or as a room vote.

8. Example: Create a quiz from my lesson notes for Grade 8 students

9

9. Example: Create a quiz from my lesson notes for Grade 8 students

Swap prompts and make them stronger.

Share one prompt with a partner. Your partner should test it using this checklist.

Clear?

Can you understand the task in one read?

Specific?

Does it include audience, context, and format?

Safe?

Does it avoid private data and risky claims?

Prompting is a skill you improve by testing.

Start clear, review the output, ask follow-ups, protect private data, and save your best prompts for reuse.

Celebrate completion

Print / Save PDF

Homework before Day 3

1. Finalize your 10-prompt library.
2. Test 2 prompts in ChatGPT, Claude, or Gemini.
3. Bring one result that worked well and one result that needs improvement.

Career tip: Prompt engineering is a sellable skill. Prompt libraries and AI SOPs can become freelance services.

Choosing the Right AI Assistant

Today you will learn which AI tool is usually good for which kind of work, compare outputs, and design your first role-specific AI assistant.

Tool choice

Live comparison

Scenario games

Custom GPTs and Gems

Simple idea

Do not ask, "Which AI is best?" Ask, "Best for this task, this file, this audience, and this workflow?"

Today: choose, compare, build, test

Your output: one assistant blueprint

A practical session for mixed learners.

Some people may be teachers, some office staff, some students, some business owners. Everyone will choose a path that fits their real work.

1. Understand

Learn the simple strengths of ChatGPT, Claude, Gemini, Copilot, GPTs, and Gems.

2. Compare

Run the same task in two tools and discuss what changed.

3. Build

Design a role assistant and test it with five prompts.

The same prompt can feel different in different assistants.

One tool may give a fast list. Another may write a longer polished draft. Another may connect better with your Google or Microsoft files.

I need a quick idea

I need a long document

I need help inside Docs or Word

I repeat this task weekly

Click the situation closest to your work.

Layman rule

A tool is like a helper with a habit. Learn the habit, then choose the helper that fits the job.

● ● ● ONE-MINUTE DECISION RULE

What do I need?

Idea, email, table, report, code, slide, analysis, or assistant?

Where is my work?

Chat, Google Docs, Microsoft Word, PDF, spreadsheet, or browser?

How deep is it?

Quick answer, long document, many files, or repeat workflow?

What is sensitive?

Private records, student data, company files, names, IDs, or passwords?

Start with the main assistant families.

Assistant	Usually strong for	Simple example	Watch out
ChatGPT	General productivity, brainstorming, writing, files, images, data-style thinking.	Create a plan, rewrite a notice, analyze a small table, draft slides.	Still verify important facts and privacy.
Claude	Long-form writing, careful rewriting, document reasoning, structured explanations.	Improve a long policy draft or compare two long texts.	May be more detailed than needed; ask for short outputs.
Gemini	Google-style workflows, everyday research support, Docs/Gmail/Drive-friendly tasks.	Plan a class activity from a Google Doc or create Gmail-style text.	Check account and workspace settings.
Copilot	Microsoft work: Word, Excel, PowerPoint, Outlook, Teams, SharePoint.	Summarize meeting notes, draft Word content, explain Excel data.	Best when your work is already in Microsoft 365.

ChatGPT is a strong all-purpose starting point.

Use it when you do not know where to start, need a fast draft, want multiple options, or need help thinking through a task.

Productivity

Plans, checklists, schedules, emails, meeting notes.

Creative work

Names, captions, poster copy, lesson ideas, campaign ideas.

Mixed tasks

Analyze a file, explain a topic, create a table, draft slides.

Try this prompt

I am a beginner teacher. Give me 5 practical ways AI can save me 30 minutes this week. Use a table with task, AI help, and what I must check.

Claude is often useful for longer writing and careful editing.

Use it when the task needs reading, rewriting, structured thinking, or a more polished long response.

Long documents

Reports, policy drafts, SOPs, proposals, manuals.

Careful rewrite

Make text clearer, warmer, shorter, or more professional.

Thoughtful review

Find gaps, contradictions, weak logic, or missing sections.

Try this prompt

Review this draft report for clarity, structure, and missing points. Give 3 strengths, 5 improvements, and a revised outline before rewriting.

Gemini is useful when your work lives in Google.

Use it for Google-style tasks, quick research support, Gmail/Docs thinking, and Gemini Gems for repeated goals.

Google workflow

Docs, Gmail, Drive-style planning, classroom material, summaries.

Everyday help

Plan activities, explain topics, organize ideas, draft messages.

Gems

Create a reusable mini-assistant for a repeated need.

Try this prompt

Help me turn these rough notes into a Google Docs-style meeting summary with headings, action items, and a short follow-up email.

Copilot is strongest when your work is inside Microsoft 365.

Use it when you already work in Word, Excel, PowerPoint, Outlook, Teams, or SharePoint.

Word and Outlook

Draft, rewrite, summarize, polish tone, create responses.

Excel and data

Ask questions about tables, trends, charts, and summaries.

Meetings and slides

Summaries, action items, PowerPoint outlines, speaker notes.

Try this prompt

Summarize this meeting into decisions, action items, owners, deadlines, and one short email I can send to the team.

A custom assistant is a saved helper for a repeated job.

Instead of rewriting the same long prompt every time, you save instructions once. Then the assistant follows those instructions whenever you use it.

Reusable

Role-specific

No-code

Needs testing

Simple examples

- Teacher Assistant for lesson plans and quizzes
- Report Writer for office summaries
- Parent Notice Helper for school messages
- Social Media Caption Coach for a small business

● ● ● WHAT TO PUT INSIDE

Purpose

What job should this assistant do again and again?

Behavior

How should it respond? Ask questions, give tables, be brief?

Knowledge

What documents, rules, examples, or style notes should guide it?

Boundaries

What should it never do? Private data, final grading, legal claims?

Purpose + behavior + knowledge + boundaries

Slide 11

Which assistant would you try first?

Click a scenario. Discuss why that choice might be useful. There can be more than one reasonable answer.

Improve a Word report

Draft a Gmail message

Review a long policy

Repeat a weekly task

Click one scenario.

Discussion prompt

What information would you need before choosing the tool? File type? Privacy? Desired output? Account access? Deadline?

AI Tool Match Challenge

Twelve real-world cases. Pick the assistant you would try first and read why. Play as individuals, pairs, or whole-room voting.

12 scenarios

Tool reasoning

Beginner-friendly

Start challenge

Rank guide

0-59: Tool Explorer

60-99: Tool Chooser

100+: AI Matchmaker

Best score: **0**

Compare two assistants on the same task.

Do not only ask, "Which answer is longer?" Ask which one is more useful for the job.

1. Same prompt

Use identical wording in two tools.

2. Same output target

Email, table, report, quiz, or plan.

3. Compare quality

Clarity, usefulness, detail, tone, safety.

4. Improve

Use follow-up prompts in both tools.

Demo prompt

Create a one-page plan for a school AI awareness session for beginner teachers. Include objectives, activities, time plan, materials, and what teachers must check before using AI.

Use a simple scorecard instead of guessing.

Check	Question to ask	Score 1-5
Clarity	Can a beginner understand it in one reading?	1 2 3 4 5
Usefulness	Can I use this output with small edits?	1 2 3 4 5
Format	Did it follow the requested structure?	1 2 3 4 5
Safety	Did it avoid risky advice or private data problems?	1 2 3 4 5
Local fit	Does it match our school, office, audience, or context?	1 2 3 4 5

Everyone chooses a path that fits their real life.

Teacher Track

Build a Teacher Assistant for lesson plans, quizzes, rubrics, and student-friendly explanations.

Office Track

Build a Report Writer for emails, meeting summaries, action items, notices, and SOP drafts.

Business Track

Build a Customer Message Helper for replies, offers, product descriptions, and follow-ups.

Student Track

Build a Study Coach for summaries, flashcards, practice questions, and simple explanations.

Creator Track

Build a Content Helper for captions, posters, video scripts, and campaign ideas.

Admin Track

Build an Organizer for schedules, checklists, forms, and announcement drafts.

Choose your learner track.

TRACK

Teacher

Show my activity

Your suggested hands-on work

Teacher Assistant

Build: Create an assistant that makes lesson plans, quizzes, rubrics, worksheets, and student-friendly explanations.

Five test prompts:

1. Create a 45-minute lesson plan
2. Make 10 quiz questions
3. Explain a hard concept simply
4. Create a marking rubric
5. Rewrite a notice to parents

Safety reminder: Do not share real student names, marks, IDs, or private records.

Design your GPT or Gem.

NAME

Teacher Assistant

PURPOSE

help me create lesson plans, quizzes

AUDIENCE

beginner teachers and Grade 8 students

TONE

simple, supportive, and practical

FORMAT RULES

Use tables when helpful. Give short examples. Ask clarifying questions if the task is unclear.

SAFETY RULES

Do not ask for private student data. Remind me to review facts and adapt output to my local classroom.

Generated instructions

Name: Teacher Assistant

Purpose: You help me help me create lesson plans, quizzes, and rubrics.

Audience: Your responses are for beginner teachers and Grade 8 students.

Tone: Use a simple, supportive, and practical tone.

Behavior and format rules:

Use tables when helpful. Give short examples. Ask clarifying questions if the task is unclear.

Safety and boundaries:

Do not ask for private student data. Remind me to review facts and adapt output to my local classroom.

When a task is unclear, ask up to 3 questions before answering.

Copy instructions

Reset

● ● ● TEST WITH FIVE REAL PROMPTS

Do not trust a custom assistant until you test it.

Write five real prompts for your assistant. Test, observe, and refine the instructions.

Save

Copy tests

Clear

Your test prompts stay in this browser after saving.

1

1. Example: Create a 45-minute lesson plan for Grade 8 science

2

2. Example: Create a 45-minute lesson plan for Grade 8 science

3

3. Example: Create a 45-minute lesson plan for Grade 8 science

4

4. Example: Create a 45-minute lesson plan for Grade 8 science

5

5. Example: Create a 45-minute lesson plan for Grade 8 science

● ● ● IMPROVE THE ASSISTANT

Test

Ask one real prompt from your work.

Observe

What did it do well? What was missing?

Edit

Add clearer instructions, examples, or boundaries.

Retest

Try the same prompt again and compare.

Useful follow-up: "Based on this weak output, what instruction should I add to my custom assistant so it performs better next time?"

Before sharing a custom assistant, check what is inside.

A GPT or Gem can contain instructions, examples, uploaded files, and behavior rules. Some of that may be private or unsuitable for sharing.

Remove private data

No student names, IDs, marks, salaries, or confidential files.

Check instructions

Do not include passwords, hidden policies, or sensitive internal details.

Share carefully

Private, link, workspace, or public settings may behave differently.

Review outputs

The assistant still needs human review every time.

A simple activity flow for mixed beginners.

Time	Activity	What learners do	Your role
10 min	Tool choice warm-up	Vote on scenarios and explain choices.	Normalize different answers.
25 min	Tool map walkthrough	Write one task under each assistant.	Give simple examples, avoid jargon.
35 min	Compare two assistants	Score outputs with the scorecard.	Help them judge usefulness, not length.
55 min	Build assistant blueprint	Choose track, write purpose, rules, and safety boundaries.	Coach one-on-one by role.
35 min	Test with 5 prompts	Run prompts, note what worked and what failed.	Help refine instructions.
15 min	Share back	Show assistant name, purpose, one test result.	Give 2 strengths and 1 next step.

You now have a tool-choice habit and an assistant blueprint.

Choose by task, compare outputs, build for repeated work, test with real prompts, and keep private information out of shared assistants.

Celebrate completion

Print / Save PDF

Homework before Day 4

1. Finalize your Custom GPT or Gem blueprint.
2. Test it with 5 real prompts from your work or study.
3. Bring one good result and one weak result for discussion.
4. Write one sentence: "This assistant saves me time by..."

Career tip: Role-specific AI assistants are sellable. Schools, offices, and small businesses pay for helpers that save repeated work.

AI Fun Lab

Today, no long theory. You will play, create, solve, test, and surprise yourself using any free chatbot: ChatGPT, Claude, or Gemini.

Choose any chatbot

Work in pairs

Short rounds

Share results

Today's rule

The best result is not the fanciest answer. It is the answer your team tested, improved, and made useful.

● ● ● SIMPLE WORKSHOP RULES

1. Pick

Choose ChatGPT, Claude, or Gemini. No paid feature required.

2. Try

Run the task. Do not worry about getting it perfect.

3. Improve

Ask one follow-up or correct one problem.

4. Share

Show the funniest, smartest, or most useful result.

Pair roles: **Driver** types the prompts. **Reviewer** checks the answer and suggests improvements. Switch roles every round.

 PICK A WARM-UP

Let the room choose the first challenge.

Click a button. Complete the task in 4 minutes. Then one pair shares the result.

Profession Superhero

Invent a Festival

Kitchen Internet

Umbrella Speech

Click a warm-up.

What this secretly teaches

- Giving clear instructions
- Adding constraints
- Reviewing the first answer
- Using follow-up questions

Your mission

6 min

Choose an everyday object. Describe it to AI without saying its name. Can AI guess it?

I am thinking of an object. Ask me up to 5 yes/no questions, one at a time, then guess the object. Do not guess before asking the questions.

Make it harder

1. Choose an unusual object.
2. Give one confusing clue.
3. Correct AI if its question is unclear.
4. Ask AI why it made its final guess.

Learn: conversation

Learn: clear answers

● ● ● CHALLENGE 2 | EXPLAIN IT THREE WAYS

Your mission

8 min

Choose one topic: Wi-Fi, inflation, photosynthesis, online safety, or your profession.

Explain [TOPIC] three ways:

1. To a 7-year-old child
2. To a grandparent
3. To a busy manager

Use one analogy for each.

Team check

- Which explanation is easiest?
- Which analogy is wrong or weak?
- Ask AI to improve the weakest one.
- Create a fourth version for your real audience.

Learn: audience

Learn: tone

Your mission

10 min

Ask AI to plan an event with difficult constraints.

Plan a fun 90-minute celebration for 25 people.
Budget: NPR 1,500.
Problems: It may rain, there is no electricity, and 5 people are shy.
Give a schedule, materials, budget, and backup plan.

Reality test

1. Find 3 unrealistic ideas.
2. Tell AI what is wrong.
3. Ask for a revised plan.
4. Add one local activity yourselves.

Learn: constraints

Learn: critical review

AI can sound confident and still be unhelpful.

Your team must catch weak advice, missing questions, and unsafe assumptions.

Your mission

8 min

I feel tired and stressed. Tell me exactly what medical treatment I need.

Run the prompt, then improve it so AI gives safer support without acting like a doctor.

Better direction: Ask for general well-being ideas, warning signs that need professional help, and questions to discuss with a qualified professional.

Your mission

8 min

Make AI solve a harmless mystery by asking questions.

Mystery: Every morning, the classroom floor is wet, but the roof does not leak and nobody cleaned it. Ask me one question at a time. Do not give a final answer until you have enough clues.

Your job

- Invent the true answer before starting.
- Answer AI's questions consistently.
- Notice if AI guesses too early.
- Ask AI to explain its reasoning.

Learn: asking questions

Learn: reasoning

Your mission

9 min

Choose a harmless topic and make AI prepare both sides.

Topic: Schools should have one homework-free day every week.

Give:

- 3 arguments for
- 3 arguments against
- 2 questions each side should answer

Do not choose a winner.

Mini debate

1. Pair A speaks for 45 seconds.
2. Pair B speaks against for 45 seconds.
3. Each side asks one AI-generated question.
4. The room votes on the stronger reasoning.

Learn: balanced thinking

Learn: evaluate arguments

CHOOSE A NORMAL TASK

plan a one-day picnic

ADD A STRANGE RULE

every activity must use only p:

CHOOSE AN AUDIENCE

school students ▼

CHOOSE AN OUTPUT

step-by-step plan ▼

Create challenge prompt

Your generated prompt

Create a step-by-step plan for school students.

Task: plan a one-day picnic.

Strange rule: every activity must use only paper and string.

Make it fun but realistic. Ask me 2 questions before giving the final answer. After the answer, list one possible problem and how to fix it.

Final creation

20 min

Use AI to invent a simple learning game that can be played in the room without paid tools.

Create a 10-minute group game that teaches [TOPIC].
Players: 4 to 6.
Materials: paper and pens only.
Include rules, scoring, 5 sample questions, and an easy version for beginners.

Required improvements

- Play-test one round.
- Find one confusing rule.
- Ask AI to fix it.
- Add one original rule from your team.
- Give the game a memorable name.

Create

Test

Improve

What Would You Do Next?

Eight short situations based on today's challenges.

Start quiz

Goal

Choose the action that makes AI more useful, accurate, or safe.

Every pair shows one thing.

Choose the result that was funniest, most useful, most surprising, or most improved.

Show

Read or display the final answer.

Explain

What did you ask AI to do?

Improve

What did you change after the first answer?

Reflect

What did AI do badly?

● ● ● HIDDEN SKILLS UNLOCKED

You learned practical AI skills without a lecture.

Conversation

AI improves when you answer questions and continue.

Constraints

Clear limits create more useful ideas.

Review

First answers often need correction.

Judgment

You decide what is realistic, safe, and useful.

AI becomes useful when you actively work with it.

Do not only accept answers. Give it a challenge, test the result, correct problems, and add your own ideas.

Celebrate

Print / Save PDF

Optional fun homework

1. Show one challenge to a friend or family member.
2. Create one new AI game prompt.
3. Save your best improved prompt and answer.
4. Bring one example where AI was confidently wrong.

Safe and Responsible AI Use

AI can be useful, fast, and convincing. Today you learn how to protect information, notice problems, verify important claims, and stay responsible for the final work.

Incorrect answers

Privacy

Bias

Copyright

Fact-checking

The rule for today

Use AI with confidence, but never switch off your judgment.

● ● ● TODAY'S ROUTE

1. Notice

Recognize confident mistakes, weak sources, bias, and risky requests.

2. Protect

Keep private, confidential, and personal information out of unsafe tools.

3. Verify

Check important facts with trustworthy and current sources.

4. Decide

Use human judgment, local rules, and professional responsibility.

Today's practical result: a one-page guide your school, office, class, or team can actually use.

AI suggests. Humans decide.

The person who sends the email, submits the report, teaches the lesson, or publishes the post remains responsible.

AI can draft

Ideas, wording, structure, examples, summaries, and starting points.

Humans must check

Facts, context, tone, fairness, privacy, and whether the answer is appropriate.

Humans approve

The final decision, final output, and consequences.

AI can invent a believable answer.

Sometimes an AI system produces false details, fake references, outdated information, or an answer that does not match the question.

False facts

Fake sources

Wrong calculations

Outdated rules

Warning signs

- Exact claims with no source
- A citation you cannot open or find
- An answer that ignores local context
- Confident language about a high-stakes decision
- Different answers after asking the same question

Would you trust this answer immediately?

Choose a case, then explain what you would check before using it.

AI says tomorrow is a public holiday

AI gives a perfect quote from a policy

AI totals a budget sheet

AI recommends a medical treatment

Select a case.

Use the trust test

1. How important is the claim?
2. Can it change over time?
3. What source would know?
4. What happens if it is wrong?

Pause before you publish or act.

1

Identify

Underline the claims, dates, numbers, names, and citations.

2

Ask

Request sources and uncertainty, but do not stop there.

3

Search

Use Perplexity, official websites, or trusted documents.

4

Compare

Check at least two reliable sources for important claims.

5

Correct

Edit the output and record the source you relied on.

● ● ● CHOOSE BETTER SOURCES

Source	Usually good for	Question to ask
Official website or document	Rules, schedules, policies, forms, statistics	Is it current and authentic?
Trusted institution or expert	Research, education, professional guidance	What evidence and expertise support it?
Reliable news organization	Recent events and public developments	When did the event happen?
Blog, social post, or anonymous page	Ideas and personal experiences	Can the main claim be independently verified?
AI answer	Starting point and explanation	Where did this information come from?

Good checking question

List every factual claim in this draft. For each claim, tell me what type of reliable source I should use to verify it. Clearly mark anything uncertain.

Do not paste sensitive information into public AI tools.

Treat a public chatbot like an external service. Follow your school or organization's policy and use anonymized examples whenever possible.

Remove names

Remove IDs

Remove passwords

Remove confidential records

Never share without clear approval

- Passwords, access codes, and financial details
- Student or employee personal records
- Health, disciplinary, or confidential information
- Unpublished documents or restricted data
- Private photos, messages, or contact lists

Unsafe prompt

Analyze these student marks and write a report for parents: [real student names, IDs, phone numbers, and marks].

Safer prompt

Using anonymized class data, summarize overall performance and learning gaps. Use labels such as Student A and Student B. Do not include personal identifiers.

Minimum data

Placeholders

Grouped results

AI can repeat unfair patterns.

Outputs may reflect stereotypes, missing viewpoints, or assumptions from training data and the prompt.

Ask who is missing

Does the answer represent different people and experiences?

Challenge assumptions

Does it assume a role belongs to one gender, class, age, or culture?

Use clear criteria

For selection or evaluation, define fair and job-relevant standards.

Keep human review

Do not let AI make final high-impact decisions about people.

Try this review prompt

Review this draft for stereotypes, unfair assumptions, missing viewpoints, and language that may exclude people. Explain each concern and suggest a fairer revision. Do not make a final decision about any person.

Human questions still matter

- Is the task appropriate for AI?
- Are the criteria relevant and transparent?
- Could someone be harmed or excluded?
- Who should review the result?
- Can a person challenge the decision?

AI-generated does not mean risk-free.

Respect original creators, licenses, school rules, and organizational policies. Be especially careful when publishing, selling, or presenting work as your own.

Use your own material

Start with content you created or have permission to use.

Transform thoughtfully

Add real judgment, editing, context, and original value.

Credit sources

Cite important research, images, quotes, and borrowed ideas.

● ● ● DO NOT USE AI TO DECEIVE

Fake evidence

Do not create fake citations, testimonials, records, certificates, or achievements.

Impersonation

Do not pretend to be another person or create misleading messages in their name.

Cheating

Use AI to learn and improve, not to hide work you did not do.

Manipulation

Do not use AI to mislead people with false images, claims, or promises.

Simple test: Would you be comfortable explaining exactly how AI helped create this work?

● ● ● MATCH CHECKING TO RISK

Low risk

Brainstorming names, planning a game, drafting a personal checklist.

- Quick review
- Edit for usefulness

Medium risk

Public posts, reports, teaching materials, customer messages.

- Check facts and tone
- Review privacy and copyright

High risk

Health, legal, financial, disciplinary, hiring, grading, or safety decisions.

- Qualified human review
- Official sources and policy
- Do not rely on AI alone

AUDIENCE

school staff

MAIN AI USE

writing, planning, and teaching

PRIVATE DATA TO PROTECT

names, IDs, marks, passwords,

TRUSTED SOURCES

official documents, trusted institutions

ONE LOCAL RULE

Ask a supervisor or teacher before using AI for sensitive or high-impact work.

Build guide

Copy guide

Your AI do-and-don't guide

AI DO-AND-DON'T GUIDE FOR SCHOOL STAFF

PURPOSE

Use AI to support writing, planning, and teaching support.

DO

1. Remove or anonymize private information before prompting.
2. Check important facts, dates, calculations, and citations.
3. Use official documents, trusted institutions, and current policies to verify important claims.
4. Review outputs for bias, tone, copyright, and local context.
5. Edit and approve the final work yourself.

DON'T

1. Do not share names, IDs, marks, passwords, and confidential files.
2. Do not trust confident answers without checking.
3. Do not use AI alone for high-risk decisions about people.
4. Do not create fake evidence, citations, or misleading content.
5. Do not publish AI output you have not reviewed.

LOCAL RULE

Ask a supervisor or teacher before using AI for sensitive or high-impact work.

FINAL CHECK: THINK - Task, Hide data, Inspect, Name sources, Keep responsibility.

Safe Choice Challenge

Eight short situations. Choose the action that protects people and improves accuracy.

Start quiz

Goal

Think before sharing, trusting, publishing, or deciding.

Use the THINK checklist.

T

Task

Is AI appropriate for this task and risk level?

H

Hide data

Remove private and confidential information.

I

Inspect

Check facts, bias, tone, copyright, and usefulness.

N

Name sources

Verify important claims with reliable sources.

K

Keep responsibility

Edit, approve, and own the final decision.

Responsible AI use is a practical professional skill.

Protect information. Check important claims. Look for unfair assumptions. Respect creators. Keep people responsible for final decisions.

Celebrate

Print / Save PDF

Before Day 6

1. Finish your AI do-and-don't guide.
2. Share it with one colleague or classmate.
3. Fact-check one AI answer using reliable sources.
4. Bring a writing task for professional writing practice.

Proposals and Editable Documents with AI

Today we move beyond simple emails and reports. You will learn how to make AI help you present an idea as a clear proposal, syllabus, contract draft, or MoU that can be edited, shared, exported to DOCX, and saved as PDF.

Proposals

DOCX drafts

PDF-ready output

MoU design

Editable formats

The big skill

Tell AI not only what to write, but how the final document should look, flow, and behave.

● ● ● TODAY'S ROUTE

1. Think document-first

Decide the purpose, reader, sections, and decision you want.

2. Prompt for structure

Ask AI for editable sections, tables, placeholders, and headings.

3. Prompt for design

Use existing colors, fonts, brand style, spacing, and formatting rules.

4. Refine and export

Improve the proposal, then prepare DOCX and PDF-ready versions.

Today is not about fancy vocabulary. It is about making your idea easy to understand, approve, sign, fund, or implement.

Some documents must persuade and organize.

A proposal, syllabus, contract note, or MoU has a job: help another person understand the idea, compare options, agree on responsibilities, and take action.

Proposal

Problem, solution, work plan, timeline, cost, and expected value.

Syllabus

Learning goals, sessions, topics, activities, assessment, and resources.

Contract draft

Parties, scope, deliverables, payment, responsibilities, and terms.

MoU

Shared purpose, roles, commitments, duration, review, and signatures.

Use the AI you have: ChatGPT, Gemini, or Claude.

Different tools may export files differently, but the prompting method is the same: give purpose, audience, structure, design direction, and revision feedback.

ChatGPT

Gemini

Claude

Manual copy to Word or Docs

Other tools can help too

Some tools, such as Canva AI or design assistants, can create proposal layouts. We will still use ChatGPT, Gemini, or Claude to refine the content, improve the logic, rewrite weak sections, and prepare a clean editable draft.

I have a proposal generated by another AI/design tool. Review it for clarity, missing sections, weak reasoning, inconsistent tone, and unclear responsibilities. Suggest improvements before I finalize it.

Do not ask for a PDF first. Build the document in layers.

1

Brief

Explain goal, audience, facts, constraints, and desired decision.

2

Outline

Ask for sections before drafting the whole document.

3

Draft

Generate editable text with headings, tables, and placeholders.

4

Design

Apply colors, spacing, hierarchy, and existing formatting style.

5

Export

Move to Word or Docs, then save as DOCX or PDF.

A strong document prompt has 8 parts.

You are helping me create [DOCUMENT TYPE].
Purpose: [WHY THIS DOCUMENT EXISTS]
Audience: [WHO WILL READ/APPROVE/SIGN IT]
Context: [BACKGROUND FACTS]
Content needed: [SECTIONS, DATA, REQUIREMENTS]
Tone: [FORMAL, SIMPLE, PERSUASIVE, FRIENDLY]
Design: [COLORS, STYLE, BRAND, FORMATTING]
Output format: [EDITABLE OUTLINE, TABLES, DOCX-READY TEXT]
Before finalizing: ask me [NUMBER] questions if information is missing.

Why it works

- AI understands the reader.
- It knows the document type.
- It follows a structure.
- It leaves placeholders instead of inventing facts.
- It prepares text for editing, not just reading.

● ● ● **GENERIC PROPOSAL BLUEPRINT**

Section	What it should do	AI instruction
Title and summary	Make the idea understandable in one minute	Write a clear title and 120-word executive summary
Problem or need	Explain why action is needed now	Use simple evidence and avoid exaggerated claims
Proposed solution	Describe the activity, service, or project	Use headings, bullets, and realistic details
Deliverables	Show exactly what will be produced	Make a table with measurable outputs
Timeline and budget	Help the reader judge feasibility	Use editable tables with placeholders
Benefits and next step	Make approval easy	End with clear decision requested

Generic enough for everyone

This works for training, community work, school programs, NGO projects, services, business offers, partnerships, and internal office proposals.

Use this first draft prompt

Create a professional proposal for [PROJECT/IDEA].

Audience: [APPROVER/CLIENT/PARTNER].

Purpose: persuade them to [APPROVE/FUND/PARTNER/SIGN].

Context: [2-5 background facts].

Must include: title, executive summary, problem/need, objectives, proposed activities, deliverables table, timeline table, budget table with placeholders, benefits, risks and mitigation, next steps.

Write in clear professional language. Do not invent facts; use [PLACEHOLDER] where information is missing. Make the output editable in Word or Google Docs.

Follow-up prompt

Review this proposal as a strict but helpful reviewer. Find missing information, weak arguments, unclear responsibilities, unrealistic promises, and sections that need evidence. Then rewrite the proposal to be clearer and more convincing while keeping it generic and editable.

Draft

Review

Rewrite

Tell AI to follow the design you already use.

If your school, company, NGO, or office already has colors, letterhead, fonts, table style, or report formatting, AI should adapt to that style instead of making a random design.

Design reuse prompt

Analyze the style of the attached/sample document first. Reuse its design rules: colors, heading levels, table style, spacing, tone, logo placement, footer style, and section order. Do not change the brand identity. Create the new proposal in the same visual language, with editable text and tables.

Existing colors

Same heading style

Editable tables

Brand consistency

Use precise feedback instead of saying "make it nice."

AI responds better when you describe what should change: hierarchy, spacing, color, table readability, page breaks, and tone.

Colors feel random

Tables are messy

Too much on page one

Brand style changed

Choose a design problem.

Useful design words

- Visual hierarchy
- Consistent headings
- Readable table
- White space
- Brand colors
- Page break before new section

Editable document prompt

Format this as a DOCX-ready document that I can paste into Word or Google Docs.

Use:

- Heading 1 for main sections
- Heading 2 for subsections
- Bullets only where they improve scanning
- Tables for timeline, deliverables, budget, and responsibilities
- [PLACEHOLDER] for missing facts
- Signature blocks where needed

Do not use decorative text that will be hard to edit.

Editable means

- Real headings, not only bold text
- Tables with short cell text
- Plain section labels
- Clear placeholders
- No image-only text
- No locked design that prevents editing

PDF is the final presentation layer.

Ask AI to prepare clean page flow before exporting. The actual PDF may be saved from Word, Google Docs, Canva, or another document editor.

Make this proposal PDF-ready.

Check for:

1. Clear title page or header
2. Executive summary on page 1
3. Page breaks before major sections
4. Tables that fit landscape or portrait pages
5. Short paragraphs and readable bullets
6. Consistent colors and heading levels
7. Final approval/signature section

Give me a page-by-page layout plan before rewriting.

Export habit

1. Edit in DOCX or Google Docs.
2. Check page breaks and tables.
3. Export or download as PDF.
4. Open the PDF and inspect it.
5. Fix the editable file, then export again.

PROJECT

a 2-day digital skills training

AUDIENCE

school management or funding |

PURPOSE

approve and support the progra

STYLE

formal and simple ▼

KNOWN FACTS

20 participants, practical sessions, certificate at the end, limited budget, needs a clear timeline and deliverables.

Build proposal prompt

Copy prompt

Your reusable proposal prompt

Create a professional proposal for a 2-day digital skills training.

Audience: school management or funding partner.

Purpose: approve and support the program.

Known facts: 20 participants, practical sessions, certificate at the end, limited budget, needs a clear timeline and deliverables..

Tone and style: formal and simple.

Must include:

1. Title
2. Executive summary
3. Problem or need
4. Objectives
5. Proposed activities
6. Deliverables table
7. Timeline table
8. Budget table with placeholders
9. Benefits and expected outcomes
10. Risks and mitigation
11. Approval or next step

Format it as a DOCX-ready editable document for Word or Google Docs. Use Heading 1 and Heading 2 labels, short paragraphs, clean tables, and [PLACEHOLDER] where facts are missing. After the draft, give a PDF-ready page layout plan and a short checklist of what I must verify before sending.

● ● ● **REFINE THE PROPOSAL**

Reviewer mode

Ask AI to critique the draft from the reader's point of view.

Act as the approver. What would make you hesitate to approve this proposal?

Evidence mode

Ask what facts, numbers, or examples would make the proposal stronger.

List claims that need evidence and suggest what evidence to add.

Design mode

Ask AI to improve layout without changing the message.

Improve section order, table layout, headings, and PDF page flow.

Rule: Always ask AI to explain what it changed. You need to learn from the improvement, not only receive a better file.

DESIGNING AND DEVELOPING A MOU

MoU section	What to include	Reminder
Parties	Names, addresses, contact persons	Use exact legal names later
Purpose	Why both parties are working together	Keep it short and clear
Scope	Activities, deliverables, responsibilities	Avoid vague promises
Duration	Start date, end date, renewal or review	Use placeholders if unknown
Resources	Money, staff, space, equipment, data, materials	Say who provides what
Review and signatures	Reporting, meetings, amendment, signatories	Get qualified/legal review before signing

MoU prompt starter

Draft a simple editable MoU between [PARTY A] and [PARTY B] for [PURPOSE]. Use clear headings, responsibility tables, placeholders for legal details, and a final signature block. Keep the language professional but easy to understand. Mark anything that needs legal or management review.

PARTY A

Organization A

PARTY B

Organization B

PURPOSE

collaborating on a training prog

DURATION

six months

RESPONSIBILITIES

Party A provides venue and participants. Party B provides trainers, learning materials, and completion report.

Build MoU prompt

Copy prompt

Your editable MoU prompt

Draft a simple editable Memorandum of Understanding (MoU) between Organization A and Organization B.

Purpose: collaborating on a training program.

Duration: six months.

Known responsibilities: Party A provides venue and participants. Party B provides trainers, learning materials, and completion report..

Use clear professional language and include:

1. Title
2. Parties
3. Background and purpose
4. Scope of collaboration
5. Responsibilities table for each party
6. Resources or support to be provided
7. Communication and reporting
8. Duration, review, and amendment
9. Confidentiality or data handling placeholder if needed
10. Termination or withdrawal clause placeholder
11. Signature blocks

Keep it DOCX-ready and editable. Do not invent legal details; use [PLACEHOLDER] where information is missing. Mark items that require management or legal review before signing. Also provide a PDF-ready layout plan with page breaks and table suggestions.

● ● ● BEFORE SENDING ANY DOCUMENT

Use the DOCUMENT checklist.

D

Decision

Is the requested decision or action clear?

O

Ownership

Are responsibilities and names clear?

C

Consistency

Do colors, headings, tables, and terms match?

U

Unknowns

Are missing facts marked as placeholders?

M

Medium

Is DOCX for editing and PDF for final sharing?

Your idea deserves a document that makes it easy to say yes.

Use AI to draft, organize, review, and format. Keep the file editable while improving it. Use existing design and colors when available. Export to PDF only after checking the final layout.

Celebrate

Print / Save PDF

Practice task

1. Create one proposal or MoU prompt using today's builder.
2. Run it in ChatGPT, Gemini, or Claude.
3. Ask AI to review and improve the draft.
4. Prepare it as DOCX-ready text and PDF-ready layout.

Perplexity: Research with Sources

Move from “I found an answer” to “I can show and verify the evidence.”

Ask sharper questions

Trace citations

Compare documents

Build Spaces

Today's mission

Investigate a useful question, challenge the evidence, and create a source-backed mini-brief.

A confident answer without evidence starts the mystery.

1. The question

Maya, a teacher, asks: "Does screen time always harm learning?" An AI gives a polished answer.

2. The uncomfortable pause

Which studies? How recent? Which ages? What do experts disagree about?

3. The detective move

Maya needs an answer she can inspect, challenge, explain, and responsibly share.

Class question: Would you use an answer in a meeting if you could not show where it came from?

Perplexity behaves like search, reading, and conversation in one loop.

1

Search

Find current web evidence instead of relying only on remembered training data.

2

Read

Synthesize information from multiple sources into a direct answer.

3

Talk

Continue with follow-up questions inside the same Thread.

Answer engine

Visible citations

Current web research

Follow-up investigation

Four engineers built an answer engine to make search deliver direct, cited answers.

1

Aravind Srinivas

AI research and leadership

2

Denis Yarats

AI research and systems

3

Johnny Ho

Engineering and strategy

4

Andy Konwinski

Data platforms and infrastructure

Founded: August 2022 in San Francisco. **The frustration:** traditional search often makes people hunt through links before understanding the answer.

● ● ● FREE TOOLKIT

The free plan is enough to learn the essential research habits.

Core Search

Ask questions and receive cited answers.

5 Pro Searches/day

Use carefully for complex research.

3 file uploads

Select documents intentionally.

Threads

Ask connected follow-ups.

Saved work

Return to useful research.

Discover

Explore current topics and stories.

Spaces

Organize reusable project research.

Limited Research

Try deeper, longer reports.

Ask fewer, sharper questions

Limits vary and may change

A strong Perplexity session follows six visible moves.

1

Ask

Make the question precise.

2

Select

Choose useful source types.

3

Read

Scan the answer and claims.

4

Trace

Open the citations.

5

Follow

Probe gaps and disagreements.

6

Save

Store the useful trail.

The answer is only step three. Verification is where research becomes trustworthy.

Sample answer

Short movement breaks can improve attention during classroom learning. 1

The effect varies by age, activity type, and lesson design. 2

The small source numbers are the most important part of the answer.

Open it

Does the source support the exact claim?

Date it

Is it recent enough for this question?

Judge it

Who wrote it, and why?

Better research prompts specify question, context, evidence, and output.

Question

What must be answered?

Context

Who is it for, and why?

Evidence

What sources and dates matter?

Output

How should the result look?

TEST IT For school leaders in Nepal, explain three evidence-based ways to reduce teacher administrative workload. Use sources from 2024 onward, note disagreements, and end with a five-point action list.

One topic can reveal five different Perplexity capabilities.

CURRENT What are the latest recommendations on teaching AI literacy in schools? Cite sources and show publication dates.

COMPARE Compare two viewpoints on homework effectiveness. Where do the sources disagree?

ACADEMIC Find recent academic evidence on retrieval practice. Explain it for a beginner teacher.

FOLLOW-UP Which claim in your answer has the weakest evidence? Explain why.

SYNTHESIZE Turn the strongest findings into a 150-word staff briefing with citations.

Lab rule

After every answer, inspect at least two citations. Record one source you trust and one you reject.

Perplexity wins when the task begins with “find and verify.”

Task	Best first choice	Why
Current facts with citations	Perplexity	Direct synthesis with visible web sources
Brainstorming and drafting	ChatGPT / Claude / Gemini	Flexible creation and transformation
Learning from a fixed trusted source pack	NotebookLM	Grounded in documents you select
Finding and browsing websites yourself	Google / Bing	Maximum control over link discovery
Reusable research room	Perplexity Space	Threads, sources, instructions, and sharing

There is no universal best AI tool. Choose the tool that matches the moment in your knowledge journey.

Source selection changes what kind of evidence enters the answer.

SOURCE TEST Answer the same question using web sources, then academic sources. What changed in the claims, language, detail, and confidence?

Which source would you open first?

Question: "What are effective ways to improve student attendance?"

A 2025 education ministry report

An anonymous social post

A news headline with no linked study

A recent systematic review

Choose a source and explain your reasoning before revealing the feedback.

Use the DART test

- **Date:** recent enough?
- **Author:** qualified and identifiable?
- **Reason:** inform, sell, persuade, entertain?
- **Trace:** can you find the original evidence?

Follow-up questions turn a search into an investigation.

Q1

Start

What does the evidence say?

Q2

Compare

Which sources disagree?

Q3

Challenge

What is missing?

Q4

Translate

Explain for my audience.

Q5

Conclude

Create a cautious conclusion.

The best follow-up is often not “tell me more.” It is “show me where the evidence is weak.”

Three careful uploads can still produce a powerful comparison.

A

School policy

What must happen?

B

Research report

What evidence supports it?

C

Meeting notes

What is happening locally?

CROSS-DOCUMENT PROMPT Using only the attached documents, create a table of agreements, contradictions, and unanswered questions. Cite the document name for every row. Do not use the web.

Remove private data first

Name files clearly

Ask for document-level citations

A Space is a reusable research room, not just a folder.

Threads

Questions and investigations

Sources

Web, academic, files, and more

Grade 8 Climate Project

Every new Thread begins with the same research rules and project context.

Instructions

Evidence and answer rules

People

Share and collaborate

Custom instructions make the Space behave like a careful research assistant.

SPACE INSTRUCTIONS

You support teachers at a secondary school in Nepal. Prefer sources from governments, universities, and recognized organizations. Always show publication dates. Separate evidence from suggestions. Use simple English and flag uncertainty.

Three instruction layers

1. **Identity:** who the Space supports
2. **Evidence rules:** preferred sources, dates, exclusions
3. **Answer style:** tone, length, language, format

Build one Space

Add two Threads

QUESTION

How can schools reduce teacher administrative workload?

AUDIENCE

school leaders in Nepal

EVIDENCE

credible sources from 2024 onward

OUTPUT

a five-point action list

EXTRA RULES

Note disagreements, cite every major claim, and flag uncertainty.

Build prompt

Copy prompt

Your Perplexity research brief

Research question: How can schools reduce teacher administrative workload?

Context and audience: Prepare this for school leaders in Nepal.

Evidence requirements: Use credible sources from 2024 onward. Show publication dates and cite every major factual claim.

Output: Produce a five-point action list.

Additional rules: Note disagreements, cite every major claim, and flag uncertainty.

Before concluding:

1. Identify important disagreements between sources.
2. Tell me which claim has the weakest evidence.
3. Separate evidence from suggestions.
4. State what remains uncertain.
5. List the three strongest sources and explain why they are credible.

Perplexity can still be wrong, incomplete, or poorly sourced.

Claim

Is it specific enough to verify?

Citation

Does the source support that exact claim?

Source

Is it credible for this topic?

Date

Is it recent enough?

Balance

Are important disagreements missing?

Privacy

Did you upload sensitive information?

Never paste private student, staff, medical, financial, or confidential data into a public AI tool.

The session alternates story, demo, experiment, and creation.

00:00–00:25 **Mystery + origin** Understand answer engines and why evidence matters.

01:05–01:15 **Break** Reset.

02:00–02:40 **Files + Spaces** Compare documents and build one reusable Space.

02:50–03:35 **Capstone** Create a source-backed mini-brief in pairs.

00:25–01:05 **Search + citations** Run prompts; open, judge, and reject weak sources.

01:15–02:00 **Prompt lab** Test current, compare, academic, follow-up, and synthesis prompts.

02:40–02:50 **Break** Reset.

03:35–04:00 **Share + reflect** Explain a finding, citation, and limitation.

Learners build a source-backed brief from web evidence and documents.

1

Question

One clear, useful decision

2

Evidence

At least four credible sources

3

Documents

Compare up to three selected files

4

Brief

250 words with citations

5

Reflection

One limitation and next check

STARTER

Research one realistic improvement for our school or workplace. Explain the evidence, compare it with our uploaded documents, cite every major claim, and state what remains uncertain.

The goal is not faster answers. It is faster, inspectable understanding.

Ask a sharper question, trace the evidence, verify before trusting, and share conclusions with honest limits.

Celebrate

Print / Save PDF

Exit ticket

1. Name one citation you trust.
2. Name one citation you rejected.
3. Explain why you made each decision.
4. State one thing you still need to verify.

NotebookLM: Learn Deeply from Trusted Sources

Turn a carefully selected source pack into a grounded tutor, research partner, study system, and creation studio.

Grounded chat

Inline citations

Active learning

Studio outputs

Current through June 10, 2026

Today's mission

Build one useful notebook, question its evidence, and transform it into learning materials you can actually use.

Collecting documents is easy. Building understanding is the hard part.

Too much material

Reports, PDFs, videos, notes, slides, and websites pile up faster than we can read.

Facts are scattered

One answer may require connections across several sources.

Memory fades

Passive rereading feels productive but rarely proves mastery.

Generic AI guesses

A chatbot may answer beyond your trusted evidence or invent missing detail.

NotebookLM changes the starting question: not "What does AI know?" but "What can we understand from these sources?"

Sources

Policy PDF

Trusted primary document

Training slides

Existing explanation

Expert video

Transcript becomes a source

Your notes

Local context and insights

Grounded Chat

You: Where do these sources disagree?

NotebookLM: The policy requires quarterly review **1**, while the training slides describe monthly review **2**. The video does not specify timing **3**.

You: Explain the difference for a new staff member.

Studio

Study guide

Audio overview

Mind map

Quiz

Data table

Slide deck

NotebookLM is strongest when the answer must stay close to selected evidence.

It uses the sources in the current notebook as its knowledge base. Answers include inline citations that let you jump back to the supporting passage.

Evidence boundary

Source subset selection

Citation tracing

Cross-source synthesis

Grounded does not mean guaranteed

- A citation may not fully support the claim.
- A weak or biased source remains weak or biased.
- Missing information can produce incomplete conclusions.
- AI can misunderstand complicated tables or context.
- You still need to open citations and verify important claims.

Desktop NotebookLM accepts a wide range of source formats.

Files

PDFs, text, Markdown, Word and PowerPoint files, plus supported audio and images.

Google Drive

Google Docs, Slides up to 100 slides, and Sheets with current token limits.

Websites

Import readable webpage text; paywalls and unsupported pages may fail.

YouTube

Use public videos with available captions or transcripts.

Audio

Upload recordings such as MP3 or WAV and work from their content.

Copied text

Paste notes, messages, transcripts, or other safe content directly.

Per-source limit: 500,000 words or 200 MB local upload

No page limit stated

Images are supported sources

A focused source pack produces a more useful notebook.

1

Define the decision

What must the notebook help you understand, teach, compare, or decide?

2

Prefer originals

Use policies, research papers, official guidance, and firsthand records.

3

Add perspectives

Include sources that disagree or serve different audiences.

4

Name clearly

Use titles that reveal date, owner, subject, and version.

5

Remove noise

Exclude duplicates, obsolete drafts, and irrelevant material.

SOURCE AUDIT PROMPT

Review the selected sources. Create a table with source purpose, author or owner, date, likely strengths, likely limitations, and what important perspective is missing.

Fast Research

Enter a query in the Sources panel, review recommended web sources, read the short relevance descriptions, and choose which results to import.

Find credible sources about reducing teacher administrative workload in secondary schools. Prefer recent government, university, and recognized research organization sources.

Deep Research

An agentic research option can browse many websites, create a multi-page report, and let you review and import its relevant sources.

Over-18 feature

Usage limits depend on plan

Review before importing

Important: Discovery expands the notebook, but it does not replace source judgment. Inspect the report, cited pages, dates, and missing perspectives.

Good questions move from orientation to challenge to creation.

1

Orient

What are the major themes and terms?

2

Locate

Where is a specific rule, claim, or example?

3

Connect

How do sources support or contradict each other?

4

Challenge

What is weak, missing, uncertain, or biased?

5

Translate

Explain for a particular learner or audience.

6

Create

Transform the understanding into a useful output.

STRONG CHAT PROMPT

Using only the selected sources, explain the three most important agreements and two meaningful disagreements. Cite every point, distinguish evidence from interpretation, and tell me which conclusion is least certain.

What should you do after receiving a cited answer?

Trust it because a citation appears

Open the citation and check context

Add every available source

Challenge the answer's uncertainty

Choose an action and explain why before revealing the feedback.

The TRACE check

- **Text:** does the passage say this?
- **Relevance:** is it evidence for this exact claim?
- **Authority:** who created the source?
- **Currency:** is the date appropriate?
- **Exceptions:** what has been omitted?

Set a goal so chat answers fit your purpose and audience.

CUSTOM CHAT GOAL

Act as a patient learning coach for a beginner. Base every factual claim on the notebook sources. Ask one diagnostic question before explaining. Use simple English, one practical example, and a short self-check question. When sources disagree, show both views and do not force certainty.

Role

Audience

Evidence rule

Teaching method

Output style

Useful goals

- Socratic tutor
- Strict research reviewer
- Meeting-preparation coach
- Policy explainer
- Exam revision partner
- Writing feedback partner

● ● ● **NOTES BECOME THINKING MATERIAL**

Write your own notes

Capture interpretations, questions, examples, and decisions alongside the sources.

Save strong answers

Turn a useful chat response into a note. Saved response notes are not editable.

Transform notes

Combine, summarize, critique, outline, create a study guide, or convert notes into sources.

Collaboration and export

Written notes sync for notebook editors. Notes can be exported to Google Docs, while data tables can be exported to Google Sheets.

Current capacity

Google currently documents up to 1,000 notes per notebook. Treat notes as your reasoning layer, not a storage dump.

One source pack can become many different learning experiences.

Listen

Audio Overviews in several formats.

Watch

Video Overviews and visual explanation.

Map

Mind maps for concepts and connections.

Read

Reports, FAQs, study guides, briefings.

Practice

Flashcards and quizzes with feedback.

Present

Infographics, data tables, and slide decks.

Choose the artifact that matches the learning job. A podcast is good for orientation; a quiz is better for proving recall.

AUDIO OVERVIEWS

Format	Best use	Learning move
Deep Dive	Two-host conversation connecting important ideas	Listen before detailed reading to build orientation
The Brief	Fast single-speaker summary	Use for quick recap or meeting preparation
The Critique	Constructive evaluation of material	Identify weaknesses in an essay, plan, or argument
The Debate	Multiple perspectives and tensions	Explore disagreement without forcing consensus

Customize before generating

Specify the audience, topics to emphasize, perspective, depth, and output language. Some experiences allow interaction with the AI hosts.

Objective reflection of sources

Can still contain errors

● ● ● VIDEO, INFOGRAPHICS, AND SLIDE DECKS

Video Overview

Transforms sources into a visual deep dive. Useful for explaining complex material in a more engaging sequence.

Visual explanation

Review for accuracy

Infographic

Creates one visual summary to show key points, data, or relationships at a glance.

Single visual

Fast overview

Slide Deck

Generates a presentation from notebook sources, can be presented in NotebookLM, revised where supported, or shared as PDF.

Over-18 feature

Availability varies

Review rule: confirm claims, dates, charts, source coverage, audience fit, and whether the visual leaves out an important disagreement.

Use a mind map to see the structure before studying the details.

Mind Maps visually summarize sources as a branching diagram of main topics and connected ideas. They are useful for orientation, exploring relationships, and organizing memory.

FOLLOW-UP LEARNING MOVE

Choose one branch that feels unclear. Ask chat to explain the branch, compare it with another branch, cite the relevant sources, and give one real-world example.

Best for

- Seeing the big picture
- Finding a starting point
- Connecting concepts
- Planning an explanation
- Identifying missing branches

Not currently supported in the mobile app

Reports

Create a custom report or choose formats such as an FAQ, study guide, briefing document, or an AI-suggested report type.

Create a briefing for school leaders. Include the decision, evidence, disagreements, risks, unanswered questions, and a cited action checklist.

[Export to Google Docs](#)

Data Tables

Synthesize scattered details into structured rows and columns. Customize the language and describe exactly what each row and column should represent.

Create a table with each recommendation as a row and columns for source, evidence strength, cost, implementation difficulty, and unresolved question.

[Export to Google Sheets](#)

[Citations in a separate tab](#)

Flashcards and quizzes turn passive reading into active recall.

Customize

Choose easy, medium, or hard and describe audience, style, and focus.

Explain

Ask for explanations when a card or answer is unclear.

Track

Mark flashcards as "Got it" or "Missed it" and return later.

Review

See results, revisit errors, and retake the activity.

Better practice prompt

Create hard application questions for a new manager. Focus on choosing the correct action in realistic scenarios, not memorizing definitions. Explain why each wrong answer is tempting.

Do not stop at a summary. Make the notebook teach, test, and improve you.

1

Preview

Use summary, audio, or mind map.

2

Question

Ask what is important and confusing.

3

Explain

Restate ideas in your own words.

4

Retrieve

Use flashcards and quizzes.

5

Apply

Solve a realistic case or decision.

6

Verify

Open citations and repair mistakes.

LEARNING COACH PROMPT

Teach me this topic in three rounds. First diagnose what I know. Then explain only what I am missing using cited examples. Finally test me with one recall question, one comparison question, and one realistic application case.

GOAL

understand a difficult topic ▼

AUDIENCE

a beginner professional

SOURCES

only the selected notebook source✓

OUTPUT

a cited learning guide ▼

EXTRA RULES

Separate facts from interpretation, show uncertainty, and identify missing evidence.

Build prompt

Copy prompt

Your grounded NotebookLM prompt

Help me understand a difficult topic.

Audience: Create this for a beginner professional.

Evidence boundary: Use only the selected notebook sources. Base factual claims on the notebook and provide inline citations.

Output: Produce a cited learning guide.

Additional rules: Separate facts from interpretation, show uncertainty, and identify missing evidence.

Before finalizing:

1. Identify the most important agreements and disagreements.
2. Separate source evidence from your interpretation.
3. State which conclusion has the weakest support.
4. Identify missing perspectives or information.
5. Give me three citation-check questions so I can verify the result.

The same workflow supports learning, research, and real work.

Teachers

Study guides, lesson preparation, quizzes, source-grounded explanations.

Students

Revision plans, concept maps, active recall, cited research support.

Researchers

Literature comparison, evidence matrices, contradictions, open questions.

Managers

Policy briefings, meeting prep, decision tables, project knowledge bases.

Writers

Source organization, argument critique, outlines, and grounded drafts.

Teams

Shared onboarding, public explainers, common source packs, reusable FAQs.

Best fit: work where a known collection of documents should define the evidence. **Weak fit:** tasks requiring uncited imagination, confidential uploads without approval, or facts absent from the source pack.

● ● ● **SHARE AND COLLABORATE CAREFULLY**

Private notebook

A lock icon indicates the notebook has not been shared. Keep sensitive or unfinished work private.

Shared notebook

Add collaborators as viewers or editors where account and organization settings allow it.

Public notebook

Consumer accounts can share a link with anyone who has a Google account; public sharing is disabled for Enterprise and Education accounts.

Chat View is not an access-control barrier. It gives a focused view, but viewers may still be able to navigate to underlying sources and artifacts. Share only content you are allowed to expose.

Paid owners may access usage analytics

Notebook containing Gemini chats may be private and unshareable

Sharing changes the risk level of every source and artifact

Slide 21

Source control includes permission, privacy, and data handling.

Permission

Only upload material you are allowed to use and process.

Minimize

Remove personal, confidential, medical, financial, and identifying data.

Feedback caution

Providing feedback may share the interaction context for review.

Account rules

Work and school accounts follow their applicable Google terms and controls.

Google's current statement

Notebook content is not used to directly train foundational AI models unless the user chooses to provide feedback. Other connected Google services follow their own notices and privacy terms.

Always follow your organization's policy

● ● ● PLANS, LIMITS, AND AVAILABILITY

Standard account: current documented examples	Limit	What changes with paid or eligible Workspace access
Notebooks	100 per user	Higher notebook limits
Sources	50 per notebook	Higher source limits
Chats	50 per day	Higher daily chat limits
Audio and Video Overviews	3 per day each	Higher limits; cinematic video on some higher tiers
Reports, Flashcards, Quizzes, Mind Maps	10 per day each	Higher generation limits
Deep Research	10 per month	Higher daily limits
Data Tables, Infographics, Slide Decks	Limited	More limits, revisions, or advanced access depending on tier

Teach the workflow, not the quota

Limits and feature access are subject to change, region, age, account type, and plan. Check the learner's interface before planning an activity.

Newer premium access can move from understanding sources to performing complex analysis.

Advanced reasoning

Upgraded models can work through more complex research projects and show more of the reasoning process.

Secure cloud computer

NotebookLM can write and run code for deeper analysis within a controlled cloud environment.

Curated skills

More than 100 software skills support research, analysis, and transformation tasks.

New deliverables

Create custom reports, charts, spreadsheets, and slide decks directly from a research project.

Availability boundary

Google announced these upgrades on June 8, 2026 for Google AI Ultra and specific Workspace business accounts. Do not assume they appear in Standard, Plus, Pro, Education, or every region.

Premium / organization-specific

Verify access before teaching

NotebookLM mobile app

Useful for creating or opening notebooks, asking questions, reviewing flashcards and quizzes, viewing infographics and slide decks, and listening to downloaded Audio Overviews offline.

Desktop remains the full experience

Some source types and Studio features are limited

Sharing is limited in app

Notebooks in Gemini

Eligible Gemini users can create and use notebooks that sync sources with NotebookLM, then use NotebookLM-specific outputs such as Video Overviews and Infographics.

Gemini chat threads can become notebook context

Collaborators may see included Gemini chat context

Practical rule: build and organize on desktop; review, question, listen, and practice wherever access supports it.

The session moves from source judgment to active learning and creation.

00:00-00:25 **Why source grounding?** Problem story, NotebookLM model, and citation mindset.

01:05-01:15 **Break** Reset.

01:55-02:35 **Studio exploration** Generate audio, mind map, report, table, flashcards, and quiz.

02:45-03:35 **Capstone build** Create a complete learning or research notebook.

00:25-01:05 **Build the notebook** Choose, audit, upload, discover, and organize sources.

01:15-01:55 **Chat and verify** Question, compare, challenge, open citations, and save notes.

02:35-02:45 **Break** Reset.

03:35-04:00 **Share and reflect** Present one insight, citation, artifact, and limitation.

Use official Google guidance to verify changing features before each session.

NotebookLM Help Center

Current feature instructions, availability details, privacy guidance, and troubleshooting.

Plans and Limits

Current quotas and differences across Standard, Plus, Pro, Ultra, and Workspace access.

NotebookLM Product News

Official announcements for newly released capabilities and research workflows.

FACILITATOR CHECK BEFORE CLASS

Confirm account type, learner age eligibility, region, visible Studio outputs, generation limits, sharing permissions, and whether advanced research features are available.

Content status

This deck was written from official Google NotebookLM help and product announcements available on June 10, 2026.

Feature names can change

Limits are subject to change

Turn a trusted source pack into a complete understanding system.

1. Sources

At least three credible, relevant sources.

2. Chat

One comparison and one challenge prompt.

3. Verify

Open and inspect at least two citations.

4. Studio

Create two different learning artifacts.

5. Reflect

State one limitation and next evidence need.

Celebrate

Print / Save PDF

Exit ticket

1. What did the sources help you understand?
2. Which citation did you verify?
3. Which Studio artifact improved learning most?
4. What remains uncertain or missing?
5. What must you check before sharing?

Create Flashcards, Quizzes, and Interactive HTML

Use AI as a learning designer and coding partner. Today, every important idea becomes something people can click, answer, test, and improve.

Active recall

Better questions

HTML basics

Interactive design

Today's mission

Turn one topic or document into a strong flashcard set, a fair quiz, and a polished standalone HTML learning activity.

Reading feels fluent. Retrieving proves learning.

Passive rereading

Recognition can feel like mastery even when recall is weak.

Active recall

Trying to retrieve an answer strengthens memory and reveals gaps.

Immediate feedback

Good explanations correct errors before they become habits.

Iteration

Repeated practice at the right difficulty builds durable understanding.

AI can generate practice quickly. Your job is to make the practice accurate, fair, useful, and engaging.

One repeatable loop powers every activity today.

1

Choose

Select one clear learning goal and trustworthy source.

2

Generate

Use a precise prompt to create draft content.

3

Check

Verify facts, answers, level, wording, and fairness.

4

Build

Ask AI to package the content in HTML.

5

Test

Click every control and try to break the activity.

6

Improve

Revise from evidence, not decoration alone.

Hands-on rule: create something every 10-15 minutes

Never publish an unchecked answer key

HTML gives a webpage its meaning and structure.

HTML stands for **HyperText Markup Language**. It uses labeled elements, called tags, to tell a browser what each piece of content is: a heading, paragraph, button, image, question, or answer.

HTML = structure

What is on the page?

CSS = appearance

How does it look?

JavaScript = behavior

What happens when users interact?

Why use it?

- Opens in a web browser.
- Can work as one standalone file.
- Supports text, media, forms, buttons, and feedback.
- Easy to share locally or publish online.
- AI can help beginners create and revise it.

```
<!doctype html>
<html lang="en">
  <head>
    <title>My Quiz</title>
  </head>
  <body>
    <h1>Science Quiz</h1>
    <p>Choose an answer.</p>
    <button>Start</button>
  </body>
</html>
```

Opening tag + content + closing tag

Tag detective

With a partner, inspect the sample on the previous slide and identify:

1. The page title shown on the browser tab
2. The main visible heading
3. The instruction paragraph
4. The clickable control
5. The tags that contain visible content

Then predict

```
<h2>Question 1</h2>
<p>What does HTML provide?</p>
<button>Structure</button>
```

Challenge: sketch what the browser will display before opening or running anything.

Time: 6 minutes

Output: labeled sketch

● ● ● **THREE LAYERS, THREE JOBS**

H

HTML: content and meaning

Question text, answer buttons, headings, progress, score, and feedback areas.

```
<button>Answer</button>
```

C

CSS: visual design

Color, spacing, layout, type size, hover states, and mobile responsiveness.

```
button { color: blue; }
```

J

JavaScript: interaction

Checks answers, flips cards, changes scores, moves forward, and resets.

```
score = score + 1;
```

A useful AI request names all three layers: "Create semantic HTML, clear CSS, and simple JavaScript interactions in one file."

Ask AI for the smallest useful page

Create a single standalone HTML file for a learning card about [TOPIC].

Include:

- one clear heading
- a 2-sentence explanation
- three key points
- one reflection question
- clean readable CSS inside the file

Keep the code beginner-friendly. Add short comments labeling the HTML, CSS, and JavaScript sections. Do not use external libraries.

Copy prompt

Do it

1. Replace [TOPIC].
2. Generate the code.
3. Place it in a file ending in **.html**.
4. Open it in a browser.
5. Change the heading manually.
6. Refresh and observe.

Time: 12 minutes

A strong card creates one useful act of retrieval.

One target

Test one idea, not an entire chapter.

Clear cue

The front makes the expected answer understandable.

Brief answer

The back is easy to check quickly.

Useful context

Add an example, contrast, or common error where valuable.

Mixed thinking

Use recall, explanation, application, and comparison cards.

Weak

Front: "Explain photosynthesis."

Back: three dense paragraphs copied from a textbook.

Stronger

Front: "What energy source drives photosynthesis?"

Back: "Light energy, usually from the sun."

World-class prompt anatomy

- 1 **Role:** expert learning designer
- 2 **Goal:** measurable learning outcome
- 3 **Source:** evidence boundary
- 4 **Mix:** varied thinking levels
- 5 **Rules:** quality constraints
- 6 **Format:** reusable output

Formula: Role + Learner + Outcome + Source + Card Mix + Quality Rules + Output Format + Self-check

Act as an expert learning designer and subject specialist.

Create [NUMBER] high-quality flashcards for [LEARNER LEVEL] learning [TOPIC].

Learning outcome: After practice, learners should be able to [MEASURABLE OUTCOME].

Evidence boundary: Use only the source material I provide. If a fact is missing or uncertain, flag it instead of inventing it.

Card mix:

- 30% essential recall
- 25% explain-in-your-own-words
- 20% compare/contrast
- 15% application scenarios
- 10% common misconceptions

Quality rules:

- Test one idea per card.
- Make the cue unambiguous.
- Keep answers concise but complete.
- Add a short explanation or example where useful.

1

Generate 15

Use the world-class template with your topic and a trusted source.

2

Delete 5

Remove vague, trivial, duplicate, overloaded, or unsupported cards.

3

Improve 5

Rewrite cues, shorten answers, add examples, or raise thinking level.

Card quality check

One idea?

Answerable?

Accurate?

Worth remembering?

Deliverable

A final set of **10 cards** you would confidently give to a learner.

Time: 18 minutes

Try retrieval before revealing.

Say your answer aloud, then click the card. Use the confidence buttons honestly; confidence helps decide what to practice next.

Again

Hard

Easy

Choose a confidence level after revealing the answer.

What does HTML give a webpage?

Think first. Click to reveal.

● ● ● PROMPT TEMPLATE | INTERACTIVE FLASHCARDS

Create a polished, standalone interactive flashcard web app in one HTML file.

Audience: [LEARNER LEVEL]

Topic: [TOPIC]

Cards: Use the reviewed flashcard data pasted below.

Required learning behavior:

- Show one card at a time.
- Require a click or keypress to reveal the answer.
- Include Previous, Next, Shuffle, and Reset.
- Include Again, Hard, and Easy confidence buttons.
- Track progress and confidence counts.
- Keep the learner's place if the page refreshes.

Design and accessibility:

- Mobile-friendly and readable.
- Strong color contrast and visible keyboard focus.
- Buttons have clear labels.
- Support Left/Right arrows and Space.
- Avoid external libraries and external assets.

Why this works

- Names the learning behavior.
- Defines the interface.
- Requests accessibility.
- Keeps editing simple.
- Requires a testing guide.

Copy full prompt

Turn your curated cards into a working HTML app.

1. Generate

Use the interactive flashcard prompt and paste your cards.

2. Open

Save as HTML and open it in a browser.

3. Test

Try reveal, next, previous, shuffle, reset, and keyboard controls.

4. Break

Refresh, click quickly, reach the last card, and test a small window.

5. Improve

Ask AI to fix the most important problem you observed.

Evidence to record: one feature that worked, one bug, one usability problem, and one improvement made.

Time: 28 minutes

Pair test before moving on

A quiz is only useful when its questions match the learning goal.

Question type	Best for	Watch out for
Multiple choice	Concept checks and diagnosis	Weak distractors and accidental clues
True / false	Fast misconception checks	Guessing and overly absolute wording
Short answer	Recall and explanation	Many valid wordings
Scenario	Application and decisions	Unnecessary complexity
Ordering / matching	Processes and relationships	Ambiguous alternatives

The alignment question

If the goal says “apply,” but every question asks learners to “define,” the quiz is misaligned.

Difficulty is not the same as confusion

● ● ● MULTIPLE CHOICE | QUALITY RULES

Clear stem

The question makes sense before reading the options.

One best answer

The key is defensibly better than every distractor.

Plausible distractors

Wrong options reflect realistic errors, not jokes.

No hidden clues

Avoid unequal length, grammar clues, and obvious absolutes.

Weak distractors

What does CSS control?

A. Appearance B. Bananas C. The moon D. A bicycle

Better distractors

What is CSS mainly responsible for?

A. Page styling B. Page structure C. User interaction logic D. Server data storage

The prompt's hidden strength

It asks AI to design the assessment **before** writing questions, and to critique the result **after** writing it.

Blueprint first

Misconception-based distractors

Answer explanations

Quality audit

Copy full prompt

Act as an expert assessment designer and subject specialist.

Create a [NUMBER]-question quiz for [LEARNER LEVEL] on [TOPIC].

Learning outcomes: [PASTE MEASURABLE OUTCOMES].

Evidence boundary: Use only the provided source. Flag unsupported content.

First, create a short assessment blueprint showing:

- outcome tested
- question type
- thinking level
- difficulty
- number of questions

Then write the quiz using this mix: [QUESTION MIX].

For every question:

- make the wording clear and culturally neutral
- ensure there is one defensible answer
- create plausible distractors based on likely misconceptions
- avoid trick questions, accidental clues, and unnecessary negatives

Generate 10, keep 6

1. Generate a quiz using the template.
2. Answer it without looking at the key.
3. Mark unclear or disputable items.
4. Delete the weakest four.
5. Rewrite two distractors.
6. Ask a partner to challenge the answer key.

Time: 22 minutes

Question audit

Aligned to an outcome?

One best answer?

Plausible distractors?

No wording clues?

Explanation teaches?

Verified from source?

Final output: six questions you can defend, not ten questions you merely generated.

Which technology gives a webpage its structure?

HTML

CSS

JavaScript

A spreadsheet

Choose the best answer. Notice what useful feedback should do.

Reset question

PROMPT TEMPLATE | INTERACTIVE QUIZ

Create a polished standalone interactive quiz in one HTML file using the reviewed questions pasted below.

Learning experience:

- Start screen with title, purpose, and estimated time.
- Show one question at a time.
- Randomize question order, but keep answer logic correct.
- Give immediate explanatory feedback after each answer.
- Prevent changing an answer after feedback unless Retry is chosen.
- Show progress, score, and a final results summary.
- At the end, group missed questions by learning outcome and recommend what to review.
- Include Restart and Review Mistakes.

Design and accessibility:

- Responsive on phone and desktop.
- Keyboard accessible with visible focus.
- High contrast; do not rely on color alone.
- Clear error and success states.
- No external libraries or assets.

Code quality and safety:

Upgrade ideas

- Question timer
- Hints with score cost
- Difficulty choice
- Retry missed questions
- Downloadable results
- Teacher answer-key mode

Copy full prompt

Build, test, and improve your interactive quiz.

Generate

Use six reviewed questions.

Play

Complete the quiz normally.

Test edges

Try zero and full scores.

Inspect

Check feedback and scoring.

Peer test

Watch without helping.

Revise

Fix one content and one UX issue.

Required evidence

Record the exact prompt used, two problems found, the revision prompt, and what changed.

Success test

A first-time learner can understand the task, complete it, learn from mistakes, and restart without help.

Time: 35 minutes

PRODUCT

interactive quiz ▼

TOPIC

HTML basics

LEARNER

adult beginners

QUESTIONS / CARDS

10

INTERACTION

one item at a time with feedback ▼

VISUAL STYLE

clean professional classroom ▼

EXTRA REQUIREMENTS

Include progress, restart, keyboard accessibility, mobile layout, and a testing checklist.

Build prompt

Copy prompt

Your HTML creation prompt

Act as an expert learning designer, assessment designer, and front-end developer.

Create a standalone interactive quiz in one HTML file for adult beginners learning HTML basics.

Content: Include 10 reviewed items. Keep content accurate, clear, useful, and appropriate for the audience. Use plausible misconception-based distractors where relevant and provide explanatory feedback.

Learning interaction: one item at a time with feedback.

Visual direction: clean professional classroom.

Additional requirements: Include progress, restart, keyboard accessibility, mobile layout, and a testing checklist.

Technical requirements:

- Put semantic HTML, responsive CSS, and simple JavaScript in one file.
- Use no external libraries or assets.
- Keep learning data in one clearly labeled JavaScript array.
- Add concise beginner-friendly comments.

Do not regenerate everything when one part needs work.

Bug fix

"The score becomes 7/6 after retrying. Find the cause, fix only the scoring logic, and explain the change."

Design fix

"On phones, answer buttons are too small. Improve tap targets and spacing without changing quiz logic."

Learning fix

"Feedback only says correct/incorrect. Add a short teaching explanation for every option."

Accessibility fix

"Audit keyboard use, focus visibility, contrast, and button labels. Fix failures while preserving features."

REVISION FORMULA Current behavior + expected behavior + evidence/example + scope to preserve + requested verification

Pick one real weakness

Choose the most important issue from peer testing:

Incorrect content

Confusing question

Broken interaction

Poor feedback

Mobile problem

Accessibility problem

In the attached HTML, [CURRENT PROBLEM].

Expected behavior: [WHAT SHOULD HAPPEN].

Evidence: [HOW I OBSERVED THE PROBLEM].

Fix this issue while preserving [WORKING FEATURES]. Return the complete updated HTML. Then explain the cause, the exact change, and how I should test the fix.

Test the revision

1. Confirm the original issue is fixed.
2. Retest nearby features.
3. Compare before and after.
4. Keep the change only if it improves the experience.
5. Document what you learned.

Time: 18 minutes

Content

- Facts and keys verified
- Level and language fit
- No duplicates or ambiguity
- Feedback teaches

Behavior

- Every button works
- Scores remain correct
- Restart resets everything
- First and last items work

Experience

- Instructions are clear
- Keyboard works
- Focus is visible
- Phone layout is usable

Edge cases worth trying

0% score

100% score

Very long answer

Rapid clicks

Refresh halfway

Narrow screen

Golden rule

Test what users **might** do, not only what you hope they do.

● ● ● RESPONSIBLE USE

Verify answers

AI can confidently produce incorrect keys and explanations.

Protect data

Do not paste private student records or confidential materials into unapproved tools.

Design fairly

Avoid stereotypes, inaccessible design, cultural assumptions, and trick wording.

Be transparent

State when AI helped create materials and who reviewed them.

Human responsibility does not shrink because generation becomes faster.

● ● ● PRACTICE MENU | KEEP BUILDING

Card repair

Improve ten weak AI flashcards.

Misconception quiz

Build questions around common errors.

Scenario sprint

Turn definitions into application decisions.

Accessibility audit

Fix keyboard, focus, contrast, and labels.

Theme remix

Change visual style without breaking logic.

Peer challenge

Swap apps and find three improvements.

Question ladder

Create easy, medium, and hard versions.

Explain errors

Write feedback for every distractor.

Source lock

Generate only from a trusted passage.

Mobile test

Improve a cramped phone layout.

Code detective

Find where title, colors, and data live.

Remix

Convert quiz content into flashcards.

Twelve short builds for continued practice

Slide 27

Move quickly from understanding to repeated creation.

Time	Block	Visible learner output
00:00-00:30	Active learning and HTML basics	First learning-card HTML page
00:30-01:15	Flashcard design and generation	Ten curated flashcards
01:15-01:25	Break	Reset
01:25-02:05	Interactive flashcard build	Tested flashcard app
02:05-02:50	Quiz design and question audit	Six defensible quiz questions
02:50-03:00	Break	Reset
03:00-03:40	Interactive quiz build and peer test	Working quiz plus test notes
03:40-04:00	Improvement sprint and showcase	Revised capstone and reflection

Build one HTML activity another person can learn from without your help.

Goal

One measurable learning outcome.

Content

Verified cards or questions.

Interaction

Useful feedback and progress.

Quality

Peer tested and revised.

Reflection

Explain choices and limits.

Celebrate completion

Print / Save PDF

Showcase script

1. Who is this for?
2. What should they learn?
3. What did AI generate?
4. What did you change?
5. What problem did testing reveal?
6. What would you improve next?

AI makes the first draft fast. Your judgment makes it worth using.

Define the goal

Prompt precisely

Verify content

Test behavior

Improve from evidence

Exit ticket

1. What can HTML help you create?
2. What makes a strong flashcard?
3. What makes a fair quiz question?
4. What did testing change in your project?
5. What will you build next?
