

Project Building & Final Presentation Preparation

Today and tomorrow, we will build useful projects, polish them, and prepare a simple presentation showing how this AI training helped in real work.

1

Useful individual project

7

Simple slides to present clearly

OK

Required for certification eligibility

By the end of Day 20, everyone should be ready to present

- OK** Choose a project that solves a real problem in your profession.
- OK** Use AI tools to plan, write, research, design, improve, or organize the project.
- OK** Prepare a short presentation explaining the project and the learning journey.
- OK** Show how AI skills are now useful in your daily work.

Project completion is required for certification eligibility

What is required?

Each participant must build one practical project and present it. The project can be anything that helped them in their profession.

What type of project?

A lesson plan, quiz, CV, office document, report, poster, presentation, research summary, communication kit, portfolio, or any useful work output.

The project should answer one question: "How did AI help me do my work better< -"

A good project starts from a real work problem

1. Pick a task

Choose one task you normally do at school, office, business, or personal career development.

2. Improve it with AI

Use AI to make the task faster, clearer, more organized, or more creative.

3. Show the result

Present the final output and explain how it can be used after the training.

Simple test: If you can use the project next week in your real life or work, it is a good project.

Examples of useful projects participants can build

BACKGROUND	POSSIBLE PROJECT	HOW IT HELPS
Teacher	Lesson plan, worksheet, quiz, rubric, and classroom activity	Saves preparation time and improves classroom resources
School staff	Notice templates, parent messages, event plan, report format	Makes communication clearer and more professional
Office professional	Email pack, proposal, meeting summary, checklist, report	Improves writing, planning, and documentation
Student or job seeker	CV, cover letter, portfolio, interview practice pack	Supports career growth and confidence
Community or business	Poster, social media plan, awareness campaign, FAQ guide	Helps explain ideas clearly to the public

Every final presentation should answer these questions

- 1 What did you build?**
Show the project name and the final output.
- 2 Why did you build it?**
Explain the problem or daily task it solves.
- 3 Which AI tools did you use?**
Mention tools like ChatGPT, Claude, Gemini, Perplexity, NotebookLM, or others.
- 4 How did AI help?**
Explain what became faster, easier, clearer, or better.

Use this simple format for your final presentation

Slide 1: Title

Project name, your name, and your profession or role.

Slide 2: Problem

What task or challenge did you want to solve?

Slide 3: AI Tools Used

Which tools did you use and why?

Slide 4: Process

Show the steps: prompt, research, draft, edit, design, final check.

Slide 5: Final Output

Show screenshots, document pages, quiz, poster, video, or resource pack.

Slide 6-7: Impact & Learning

Explain how it helps your work and what you learned from the course.

What makes a presentation good?

Clear title

Each slide should have one simple message.

Short points

Use 3 to 5 bullet points. Avoid long paragraphs.

Real example

Show your actual work, not only theory.

Simple language

Explain like you are helping a friend understand.

A good presentation is not "more text." A good presentation is **clear thinking.**

Explain how this AI training helped you

- **Writing:** Better emails, reports, notices, applications, and proposals.
- **Research:** Faster summaries, comparison of sources, and document understanding.
- **Teaching:** Lesson plans, quizzes, worksheets, rubrics, and student-friendly explanations.
- **Creativity:** Presentations, posters, visuals, videos, and social communication.
- **Career:** CV, cover letter, portfolio, interview practice, and professional profile.

Example: "Grade 9 Science Resource Pack"

Problem

I needed a simple way to prepare class notes, quiz questions, and activities for mixed-level students.

AI use

I used ChatGPT to simplify explanations, Gemini for ideas, and NotebookLM to summarize trusted notes.

Final output

A lesson plan, worksheet, 10-question quiz, answer key, and classroom activity.

Impact

I can prepare resources faster and adjust explanations for students who need easier language.

Example: "Office Communication Kit"

Problem

I often write notices, meeting summaries, and follow-up messages, but it takes time to make them clear.

AI use

I used Claude and ChatGPT to draft messages, improve tone, and create reusable templates.

Final output

Five email templates, one meeting summary format, one event checklist, and a short report format.

Impact

My writing became faster, more polite, and more organized for daily office communication.

Day 19: Build a useful teacher or professional project

First half

- Choose one project idea.
- Write the problem statement.
- Select the AI tools you will use.
- Create the first version of the project.

Second half

- Improve the content and design.
- Check facts, language, and usefulness.
- Save screenshots or examples for the presentation.
- Start the 7-slide presentation draft.

Day 20: Improve the project and prepare for presentation

Polish

- Make the project complete and easy to understand.
- Fix spelling, grammar, and formatting issues.
- Make the presentation slides simple and clean.
- Prepare a short speaking script.

Peer review

- Exchange work with a friend.
- Collect feedback on clarity and usefulness.
- Improve one weak part of the project.
- Practise speaking in 5 to 7 minutes.

Use this checklist while reviewing each other's work

OK Is the project useful for the participant's real work or profession?

OK Is the final output clear, complete, and easy to understand?

OK Did the participant explain how AI was used responsibly?

OK Are facts, names, data, and spelling checked properly?

OK Can the presentation be delivered within 5 to 7 minutes?

Your project and presentation will be checked for usefulness

Project quality

Is the project complete, useful, clear, and relevant to your work?

AI process

Can you explain which tools you used and how they helped?

Responsible use

Did you check accuracy, privacy, bias, and copyright issues?

Presentation clarity

Can the audience understand your problem, output, learning, and next step?

Tip: Keep a small record of prompts, drafts, screenshots, and improvements. This will make your presentation stronger.

How to present your project clearly

Start simple

"My project is about..." and "I built this because..."

Show evidence

Display screenshots, documents, posters, quiz pages, or before-and-after examples.

Explain learning

Share what changed in your work after learning AI tools.

Do not read everything

Use slides as support. Speak naturally.

Keep time

Aim for 5 to 7 minutes. Practise once before presenting.

End with next step

Explain how you will continue using the project after training.

This training is about practical confidence

You do not need to become an AI engineer. You need to become a person who can use AI to think better, write better, prepare better, explain better, and create useful work.

Build a project that proves one thing: AI helped me improve my real work.

Useful project

Clear presentation

Responsible AI use

Professional growth
