

# Prompt It. Play It. Remix It.

Today you are not learning game code. You are becoming a game director: describe a fun idea clearly, let AI build it, play it, and keep prompting until it feels great.

No coding lesson

Tic-Tac-Toe

Shooters

Racing

Platformers

Arcade showcase

## Today's mission

Use prompts to create one genuinely fun browser game that people want to play again.

The prompt is your creative control panel

Output: one fun, playable HTML game

# You describe the experience. AI handles the code.

## You choose

Genre, theme, controls, goal, difficulty, and personality.

## AI creates

The complete standalone HTML game.

## You play

Test whether it is understandable, exciting, and replayable.

## You prompt again

Request focused changes based on what playing revealed.

**No JavaScript lesson required.** Your skill is directing AI with clear, creative, testable prompts.

PICK YOUR ADVENTURE

# What kind of game would you actually enjoy playing?

## Tic-Tac-Toe+

Classic strategy with powers, themes, or unusual boards.

## Space shooter

Move, fire, dodge enemies, survive waves, beat bosses.

## Racing game

Dodge traffic, collect boosts, and chase a high score.

## Platformer

Run, jump, collect treasure, and reach the finish.

## Maze escape

Find keys, avoid danger, and escape before time ends.

## Choice adventure

Make decisions that change the story and ending.

Pick the game you want to play, not the game that sounds educational

# Play before you prompt.

This simple game already has turns, strategy, a win condition, feedback, and replay. Your prompt can transform it into something surprising.

Two players

Clear turns

Win/draw detection

Restart

X goes first. Choose a square.

**Restart game**

● ● ● A GREAT GAME PROMPT ANSWERS SEVEN QUESTIONS

1

**What game?**

Name the genre and core idea.

2

**What goal?**

Explain how players win or score.

3

**What controls?**

Mouse, touch, keyboard, or choices.

4

**What challenge?**

Enemies, time, puzzles, or opponents.

5

**What feeling?**

Fast, funny, tense, clever, or cozy.

6

**What features?**

Score, levels, lives, powers, restart.

**7. What format?** Ask for one complete standalone HTML file that opens in a browser.

## ● ● ● THE PROMPT THAT STARTS ALMOST ANY GAME

**MASTER GAME PROMPT** Act as a creative game designer and expert HTML game developer.

Create a fun, polished [GAME GENRE] called "[GAME NAME]" in one complete standalone HTML file.

Player experience:

- Theme: [THEME]
- Goal: [HOW TO WIN OR SCORE]
- Controls: [KEYBOARD / MOUSE / TOUCH]
- Challenge: [ENEMIES / OPPONENT / PUZZLE / TIMER]
- Feeling: [FAST / FUNNY / TENSE / COZY / CLEVER]

Include clear instructions, satisfying feedback, score or progress, win/lose states, restart, increasing challenge, and responsive design. Use no external files or libraries. Make it playable immediately when opened in a browser.

Before returning the complete HTML, test every control, the ending, and restart.

### Your creative job

Replace every bracket with a specific choice. The more clearly you describe the fun, the better AI can build toward it.

**Copy master prompt**

● ● ● GAME RECIPE | TIC-TAC-TOE REMIX

**READY-TO-USE PROMPT** Create a polished two-player Tic-Tac-Toe game called "Element Clash" in one standalone HTML file. Player X controls Fire and player O controls Ice. Use a beautiful animated 3x3 board, clearly show whose turn it is, detect wins and draws, keep a match scoreboard, celebrate wins, and include rematch and reset-score buttons. Add a special optional mode where each player can once per match remove one opponent mark instead of placing a mark. Explain this power clearly. Make it work with mouse, keyboard, and touch. Use no external assets.

## Easy remixes

Cats vs dogs

4x4 board

Play against AI

Best of five

Wild-card square

Vanishing marks

**Copy prompt**

# Choose a familiar starting point

Tic-Tac-Toe

Rock Paper Scissors

Memory match

Snake

Pong

Whack-a-mole

Add one theme and one rule twist. Then use the master prompt to generate the complete game.

## Success test

1. Save the returned code as an HTML file.
2. Open it in a browser.
3. Understand how to play without help.
4. Complete one full game.
5. Restart and play again.

Time: 25 minutes

**CREATIVE REMIX PROMPT** The game works. Keep all current working features, but remix the experience:

- Change the theme to [NEW THEME].
- Add one surprising rule: [RULE TWIST].
- Make success feel more satisfying with [FEEDBACK].
- Make the game more replayable with [MODE / RANDOMNESS / SCORE].
- Keep instructions simple and visible.

Return the complete updated standalone HTML. Test the new rule, all endings, and restart before returning it.

## Rule twists change games

- Board changes after every round.
- One power can be used once.
- Players secretly choose actions.
- Winning creates a harder rematch.
- A random event appears occasionally.

**Copy remix prompt**

● ● ● PLAYABLE DEMO | MINI SPACE SHOOTER

# Defend the galaxy.

Use left and right arrows or the buttons. Fire with Space or FIRE. Destroy the enemy before it reaches you.

**Left**

**Fire**

**Right**

**Start / Restart**

Press Start / Restart to begin.

SCORE 0

LIVES 3

● ● ● GAME RECIPE | SPACE SHOOTER

**READY-TO-USE PROMPT** Create a polished arcade space shooter called "Neon Defender" in one standalone HTML file. The player moves a spaceship left and right using arrow keys or on-screen touch buttons and fires using Space or a FIRE button. Enemies descend in waves and shoot occasionally. Include score, three lives, power-ups, increasing difficulty, a boss every three waves, clear instructions, pause, game over, victory feedback, and restart. Use colorful neon visuals and satisfying explosions made with CSS. Use no external assets or libraries. Make controls responsive and test the full game before returning the complete HTML.

## Remix directions

Ocean submarine

Dragon defense

Zombie survival

Robot uprising

Spell caster

**Copy shooter prompt**

# Choose your action

Shoot

Dodge

Race

Jump

Chase

Survive

Start from a complete recipe prompt. Change the theme, player goal, enemies, powers, and ending.

## Playability checklist

1. Controls respond immediately.
2. The goal is obvious.
3. Danger is visible and fair.
4. Score or progress changes.
5. The game ends and restarts correctly.

Time: 30 minutes

## ● ● ● GAME RECIPE | ENDLESS RACING

**READY-TO-USE PROMPT** Create a fast endless racing game called "Midnight Rush" in one standalone HTML file. The player drives left and right with arrow keys or touch controls, dodges traffic, collects fuel and turbo boosts, and tries to survive as distance and speed increase. Include score, best score saved in the browser, three vehicle choices, a dramatic countdown, pause, crash effects, game over, and restart. Make the road feel like it is moving using CSS animation. Use no external assets or libraries. Test keyboard, touch, collision, score, and restart.

### Possible themes

Mountain rally

Cyber city

Boat race

Sky gliders

School-bus chaos

**Copy racing prompt**

## ● ● ● GAME RECIPE | PLATFORM ADVENTURE

**READY-TO-USE PROMPT** Create a fun side-scrolling platform game called "Temple of Tiny Trouble" in one standalone HTML file. The player moves with arrow keys and jumps with Space or touch buttons. Include platforms, coins, moving enemies, three lives, checkpoints, a hidden shortcut, three short levels, a final treasure, clear instructions, win/game-over screens, and restart. Give each level a different color theme and make jumping feel responsive. Use no external assets or files. Test all levels and controls before returning the complete HTML.

### Prompt swaps

Moon explorer

Kitchen escape

Haunted castle

Cloud kingdom

**Copy platformer prompt**

● ● ● GAME RECIPE | MAZE ESCAPE

**READY-TO-USE PROMPT** Create a tense maze escape game called "The Last Lantern" in one standalone HTML file. The player moves through a randomly generated maze with arrow keys or touch buttons, finds three keys, avoids a roaming shadow, and reaches the exit before the lantern timer runs out. Only a small area around the player is visible. Include difficulty choices, sound toggle, clear instructions, win/lose screens, best time, and restart. Make every new game generate a different maze. Use no external files or libraries and test that every maze is solvable.

## Change the pressure

No timer

Two-player race

Hidden traps

Collect clues

Friendly mode

**Copy maze prompt**

● ● ● GAME RECIPE | CHOICE ADVENTURE

**READY-TO-USE PROMPT** Create an interactive choice adventure called "The Message from Tomorrow" in one standalone HTML file. The player receives mysterious messages from their future self and must make decisions that change trust, courage, and time remaining. Include at least 12 meaningful scenes, visible status meters, multiple paths, five distinct endings, a restart option, and a final summary explaining how the player's choices shaped the ending. Make the writing suspenseful and choices genuinely difficult. Use no external assets or libraries.

## Story starters

Lost expedition

School mystery

Alien diplomacy

Heist planning

Fantasy kingdom

**Copy adventure prompt**

GENRE

space shooter

THEME

cyberpunk Kathmandu

FEELING

fast and exciting

TWIST

the rules change every level

Create game idea

## Your game idea

One More Round: a fast and exciting space shooter set in cyberpunk Kathmandu. The core twist is that the rules change every level.

Prompt direction: Give the player a clear goal, simple controls, increasing challenge, satisfying feedback, a memorable ending, and an effortless restart. Ask for one complete standalone HTML file.

GAME NAME

Neon Defender

GENRE

arcade space shooter

THEME

a colorful neon galaxy

CONTROLS

arrow keys, Space, and touch buttons

GOAL

survive enemy waves and defeat the boss

SPECIAL TWIST

collect power-ups that change the weapon

MUST-HAVE FEATURES

Clear instructions, score, lives, levels, increasing challenge, satisfying feedback, pause, game over, victory, restart, responsive mobile layout, and no external files.

Build prompt

Copy prompt

## Your complete creation prompt

Act as a creative game designer and expert HTML game developer.

Create "Neon Defender", a polished arcade space shooter in one complete standalone HTML file.

Player experience:

- Theme: a colorful neon galaxy
- Goal: survive enemy waves and defeat the boss
- Controls: arrow keys, Space, and touch buttons
- Special twist: collect power-ups that change the weapon

Must-have features: Clear instructions, score, lives, levels, increasing challenge, satisfying feedback, pause, game over, victory, restart, responsive mobile layout, and no external files.

Make the game fun immediately, with a clear goal, responsive controls, fair increasing challenge, satisfying feedback, a complete ending, and easy replay. Use no external files or libraries. Before returning the complete HTML, test every control, all win/lose states, scoring, and restart. Then briefly explain how to save, open, play, and request future remixes.

● ● ● **WHEN A GAME BREAKS, DESCRIBE THE EXPERIENCE**

**REPAIR PROMPT** The attached HTML game has this problem:

[DESCRIBE EXACTLY WHAT HAPPENS]

I expected:

[DESCRIBE WHAT SHOULD HAPPEN]

I can reproduce it by:

1. [ACTION]

2. [ACTION]

3. [ACTION]

Fix the problem while preserving the current game, controls, design, and working features. Return the complete updated standalone HTML. Test the repaired behavior and nearby features before returning it.

## You do not need code vocabulary

Describe what you clicked, pressed, saw, and expected. Good evidence is more useful than guessing the technical cause.

**Copy repair prompt**

 **PROMPT AGAIN | MAKE IT MORE FUN**

### More decisions

Add upgrades, routes, powers, or risk-reward choices.

### More mastery

Add levels that demand better timing or strategy.

### More surprise

Add rare events, changing maps, bosses, or random challenges.

### More personality

Add a strong theme, funny messages, dramatic feedback, or story.

**FUN UPGRADE PROMPT** I played the game and it currently feels [BORING / REPETITIVE / TOO EASY / CONFUSING]. Make it more fun by adding [ONE SPECIFIC UPGRADE]. Preserve everything that works. Clearly explain the new feature to the player, return the complete updated HTML, and test the full game.

● ● ● **PROMPT AGAIN | ADD LEVELS THAT FEEL DIFFERENT**

**LEVEL DESIGNER PROMPT** Add three clearly different levels to this game.

- Level 1 teaches the controls and feels welcoming.
- Level 2 introduces one new challenge.
- Level 3 combines skills in an exciting final challenge.

Give each level a distinct visual theme and short introduction. Increase difficulty fairly rather than simply making everything extremely fast. Preserve working features, return the complete updated HTML, and test progression, endings, and restart.

## Levels should change play

New enemy

New environment

New rule

New decision

Boss challenge

**Copy level prompt**

● ● ● **PROMPT AGAIN | MAKE IT FEEL LIKE AN ARCADE GAME**

**POLISH PROMPT** Polish this game so it feels satisfying and professional while preserving its rules.

Improve the title screen, instructions, visual hierarchy, movement feedback, hit/success feedback, transitions, score display, win/lose screens, and restart experience. Add optional simple sound effects generated inside the file with a visible sound toggle. Keep text readable, controls responsive, and animations smooth. Return the complete updated HTML and test all controls and endings.

### Polish should clarify

- Players know what happened.
- Important objects stand out.
- Success feels satisfying.
- Failure feels understandable.
- Starting again is effortless.

**Copy polish prompt**

# Play, choose the biggest weakness, and improve it.

## Prompt 1: repair

Fix the most important broken or confusing behavior.

## Prompt 2: fun

Add one feature that creates a better decision, challenge, or surprise.

## Prompt 3: polish

Improve feedback, clarity, and the replay experience.

## Keep backups

Save each working version before replacing it. A new generation can accidentally break something good.

## Test after every prompt

Play a complete round before requesting the next change.

Time: 35 minutes

# Hand your game to a player

1. Do not explain how to play.
2. Watch what they try first.
3. Notice confusion, laughter, frustration, and retries.
4. Ask what they would change.
5. Write one final improvement prompt.

Time: 20 minutes

## Fast player rating

| Question                 | 1-5 |
|--------------------------|-----|
| I understood what to do. | —   |
| The controls felt good.  | —   |
| The challenge felt fair. | —   |
| The game surprised me.   | —   |
| I wanted to play again.  | —   |

● ● ● **PROMPT AGAIN | MAKE IT WORK EVERYWHERE**

**MOBILE AND ACCESSIBILITY PROMPT** Improve this game so it is easy to play on both computers and phones. Add clear on-screen touch controls where needed, large tap targets, visible keyboard focus, readable text, strong contrast, instructions that explain every control, optional sound, and a pause option if appropriate. Do not rely only on color to communicate meaning. Preserve the game rules and return the complete updated HTML after testing keyboard, touch-sized layout, win/lose, and restart.

### Test quickly

- Make the browser narrow.
- Try keyboard only.
- Check every button label.
- Confirm sound is optional.
- Restart several times.

**Copy prompt**

### No private data

A simple game should not request names, accounts, contacts, or personal details.

### No manipulative loops

Avoid fake rewards, deceptive buttons, and pressure designed only to keep players clicking.

### No harmful themes

Review AI-generated stories and visuals for stereotypes or inappropriate content.

### Give control

Make sound optional and provide pause, restart, and clear exit points.

**Fun respects the player.**

● ● ● ARCADE EXPANSION PACK

### Battle cards

Create cards, build a deck, and defeat opponents.

### Cooking rush

Prepare orders quickly without making mistakes.

### Tower defense

Place defenses and survive enemy waves.

### Detective mystery

Collect clues and accuse the correct suspect.

### Football penalty

Aim shots and outsmart the goalkeeper.

### City builder

Earn resources and grow a tiny city.

### Typing battle

Type accurately to defeat enemies.

### Rhythm game

Hit keys in time with visual beats.

### Escape room

Solve connected puzzles to unlock the exit.

### Pet simulator

Care for and upgrade a virtual companion.

### Trivia battle

Correct answers power attacks.

### Two-player duel

Share one keyboard and compete.

# Spend most of the session generating, playing, and improving.

| Time        | Block                                 | Visible output                  |
