

Stop. Remember. Explain. Apply.

Before starting bigger projects, we will rebuild every important skill from Days 1-10 through challenges, practical situations, team games, and quizzes.

No new project today

Super revision

Easy to hard

Learn from mistakes

Today's mission

Prove that you can choose the right AI workflow, write a useful prompt, check the result, and improve it safely.

Seeing a skill once is not the same as owning it.

Recognition

"That looks familiar." Useful, but weak.

Recall

"I can explain it without notes." Stronger.

Application

"I can use it in a real situation." Better.

Judgment

"I know when to use it and when not to." Mastery.

Today's goal: move every important idea from "I saw it" to "I can use it."

Points are useful. Explanations are worth more.

1. Think alone

Everyone gets quiet recall time first.

2. Commit

Choose an answer before discussion.

3. Explain

Say why your choice fits.

4. Challenge

A teammate may respectfully disagree.

5. Repair

Write the lesson from every mistake.

+1 correct answer

+2 clear explanation

+3 useful correction

No points for lucky guessing without reasoning

Prompt arcade

60-second memory storm

Without opening old slides, write one important rule, one practical use, and one mistake to avoid from any three days.

Solo: 60 seconds

Pair compare: 2 minutes

Class repair: 3 minutes

AI predicts useful output. It does not “know” like a careful human.

Good at

Drafting, summarizing, transforming, brainstorming, pattern work.

Can fail at

Facts, context, judgment, fresh information, and hidden assumptions.

Human job

Set the goal, provide context, check, decide, and take responsibility.

Golden rule

Helpful output is a draft until verified for its real use.

Fun game: AI or not?

Mime one task. Your team decides:

AI can assist

Human must decide

Use both

Try: write a poem, approve a loan, diagnose illness, summarize notes, choose a punishment.

A strong prompt makes the job, context, and success visible.

1

Task

What should AI do?

2

Context

What must it know?

3

Audience

Who will use it?

4

Format

How should it answer?

5

Criteria

What makes it good?

WEAK Write about AI.

REPAIR RELAY Rewrite the weak prompt for Grade 8 learners. Add a clear goal, useful context, simple tone, 3-part format, one example, and a rule to avoid unsupported claims.

● ● ● **REVISION STATION 3 | THE FIRST ANSWER IS A DRAFT**

Follow up

Ask for clarification, examples, simpler language, or another format.

Critique

Ask what is weak, missing, unclear, or unsupported.

Chain

Break a large task into outline, draft, check, and revision.

Practical example

You asked for a workshop plan. It is too generic and has no timings.

Revise the plan for 20 adult beginners, 90 minutes, limited internet, and pair work. Add timings, materials, and a simple success check. Preserve the three strongest activities.

Two-minute challenge

Turn “make it better” into a precise revision prompt with:

Current problem

Expected result

Evidence

What to preserve

There is no universal “best AI.” Match the tool to the task.

Need	Strong first choice	Reason
Brainstorm, draft, transform, converse	ChatGPT / Claude / Gemini	Flexible general assistants
Current web research with visible sources	Perplexity or search	Starts from web evidence
Learn from a selected trusted source pack	NotebookLM	Grounded in chosen sources
Create an editable proposal or MoU	Assistant + Word/Docs	Draft, review, then format and export
Create a standalone interactive activity	Assistant generating HTML	One browser-openable file

Fun game: hold up the tool name before the scenario ends

● ● ● REVISION STATION 5 | SAFE AND RESPONSIBLE AI

Accuracy

Verify important facts, calculations, claims, and answer keys.

Privacy

Remove personal, confidential, medical, financial, or protected data.

Fairness

Check stereotypes, exclusions, assumptions, and unequal effects.

Ownership

Respect sources, copyright, permission, and human accountability.

Red flag race

A manager pastes employee medical records into a public chatbot and asks it to decide who should be promoted. Find at least **five** problems and suggest a safer workflow.

Build editable first. Polish second. Export last.

1

Brief

Goal, audience, facts.

2

Outline

Sections and logic.

3

Draft

Editable content.

4

Review

Accuracy and design.

5

Export

PDF for sharing.

Practical decision

Your organization needs a partnership proposal that three people must edit before approval.

Best workflow: draft and revise in an editable format such as DOCX or Google Docs. Export PDF only after the final review.

A citation is an invitation to check, not proof by itself.

Claim

What exact statement is being made?

Support

Does the source support that exact claim?

Quality

Is the source credible for this question?

Date

Is it current enough?

Source detective

Question: "What improves student attendance?" Rank what you would open first:

1. Recent systematic review
2. Education ministry report
3. Anonymous social post
4. Headline with no linked study

There can be multiple useful sources, but broad claims need stronger evidence than one person's experience.

Control the source pack before asking questions.

Curate

Choose relevant, trustworthy sources.

Question

Orient, locate, connect, challenge.

Trace

Open citations and inspect context.

Create

Turn understanding into study outputs.

Best use?

You have six approved policy documents and need staff to compare rules, locate exceptions, and build a study guide using only those files.

NotebookLM fits well because the task begins with a controlled source collection. Grounding reduces wandering, but important claims still need checking.

HTML, CSS, and JavaScript have different jobs.

HTML

Structure and meaning: headings, text, buttons, questions.

CSS

Appearance: color, spacing, layout, typography.

JavaScript

Behavior: clicks, scoring, feedback, shuffle, restart.

Bug detective

The quiz looks beautiful, but clicking an answer does nothing.

First inspect the **JavaScript behavior**. Then test nearby features such as score, feedback, next question, and restart after the fix.

Test 0%

Test 100%

Test restart

You direct the experience. AI can build the complete file.

Game

Genre and core idea

Goal

How players win

Controls

How players act

Challenge

What creates effort

Feeling

Fun, tense, clever

Features

Score, levels, restart

Fun remix sprint

Take Tic-Tac-Toe and add one rule twist, one theme, and one accessibility improvement. Explain why each change improves the player experience.

Playtest before asking for polish

Repair one weakness at a time

Can your team identify the idea?

One person explains a concept without using the forbidden words. The team has 30 seconds to guess.

Prompt

Forbidden: instruction, ask, AI

Citation

Forbidden: source, link, proof

Privacy

Forbidden: personal, secret, data

HTML

Forbidden: webpage, tag, structure

Bias

Forbidden: unfair, stereotype, prejudice

Iteration

Forbidden: improve, repeat, revise

Why this works

If you can explain an idea in fresh language and give an example, you probably understand it beyond memorized words.

Scenario

Your school wants a short, evidence-based proposal for improving attendance. It must use recent web research, compare three existing school documents, protect student privacy, and end as a polished PDF.

Time: 8 minutes

Every teammate adds one step

Build the workflow

1. Define the decision and safe evidence needed.
2. Research current evidence and verify citations.
3. Compare approved internal documents.
4. Draft an editable proposal.
5. Review facts, fairness, privacy, and design.
6. Export final PDF after approval.

Challenge: name the best tool or format at every step and explain why.

Find the problem. Repair the workflow.

Exhibit A

"AI said it confidently, so I used it."

Exhibit B

"Make a perfect 30-page PDF" as the first prompt.

Exhibit C

A quiz where every correct answer is A.

Exhibit D

A citation that links to a page but does not support the claim.

Exhibit E

Uploading private records to get a summary.

Exhibit F

Regenerating an entire working app to fix one button.

Exhibit G

Choosing a tool because it is popular, not because it fits.

Exhibit H

Testing only the happy path once.

Choose your level. Every run is different.

Easy

Core terms and simple decisions.

Medium

Practical situations and workflow choices.

Hard

Judgment, trade-offs, and integrated problems.

Mixed

A surprise blend from all levels.

Fair quiz design

- Question order shuffles.
- Answer options shuffle.
- Correct answers are not always A.
- Feedback explains the lesson.
- Restart creates a fresh round.

CHOOSE A LEVEL

Ready to test what you remember?

0

SCORE

0/0

QUESTION

Select Easy, Medium, Hard, or Mixed to begin. Options and questions shuffle each time.

Easy

Medium

Hard

Mixed

Next question

Can you define the foundations?

AI output A useful draft that may still need checking.

Prompt Instructions and context given to AI.

Citation A route back to supporting evidence.

HTML The structure and meaning of a webpage.

Fast pair check

1. Define each idea without reading.
2. Give one practical example.
3. Name one common mistake.
4. Teach the weakest idea to your partner.

If a definition is difficult, use an analogy, example, and non-example.

Can you choose and apply the right workflow?

Situation

You need current facts with sources.

Move

Research, open citations, verify.

Situation

You need to compare approved files only.

Move

Curate a NotebookLM source pack.

Situation

A generated quiz has weak distractors.

Move

Rewrite around likely misconceptions.

Situation

A proposal must be edited by a team.

Move

Keep DOCX/Docs editable before PDF.

Situation

A game works but feels confusing.

Move

Playtest, observe, then request a focused fix.

Situation

An answer includes private names.

Move

Stop, anonymize, and follow policy.

Can you make a defensible decision under uncertainty?

CHALLENGE An AI-generated briefing cites five sources and sounds professional. Two sources are old, one citation does not support its claim, one claim comes only from a social post, and the conclusion recommends a high-stakes policy change.

Your response must include

1. What can still be used?
2. What must be checked or removed?
3. What evidence is missing?
4. Who should review the decision?
5. How should uncertainty be communicated?

Time: 7 minutes

Mark what you can do without help.

Skill	I can explain	I can apply	I need practice
Explain AI strengths and limits	☐	☐	☐
Write and revise a strong prompt	☐	☐	☐
Choose a tool by the job	☐	☐	☐
Verify sources and citations	☐	☐	☐
Protect privacy and check fairness	☐	☐	☐
Build, test, and improve an output	☐	☐	☐

Be honest: confidence without evidence is not mastery

Choose one skill to repair today

Teach one station in three minutes.

Prompt clinic

Repair a weak prompt.

Tool match

Choose tools for scenarios.

Safety desk

Find risks and safer moves.

Source court

Defend or reject evidence.

HTML lab

Explain structure, style, behavior.

Test bench

Design a useful test plan.

A strong teach-back includes: simple explanation + practical example + common mistake + one check question.

Spend most of the day retrieving, discussing, and applying.

Time	Block	Visible evidence
00:00–00:25	Memory storm + championship rules	Initial gap map
00:25–01:15	AI, prompts, iteration, and tool choice	Repaired prompts and tool decisions
01:15–01:25	Break	Reset
01:25–02:15	Safety, documents, research, NotebookLM	Scenario explanations
02:15–02:45	HTML, testing, and prompt games	Bug and playtest decisions
02:45–02:55	Break	Reset
02:55–03:30	Easy, medium, hard, mixed quiz rounds	Scores plus correction notes
03:30–04:00	Teach-back carousel + confidence audit	Personal revision plan

We are ready for projects when we can do these reliably.

Frame

State a useful goal and audience.

Choose

Select a fitting tool and workflow.

Prompt

Give context, format, and criteria.

Verify

Check facts, evidence, safety, and fairness.

Improve

Test, observe, and revise precisely.

Readiness is not a perfect quiz score. It is knowing how to notice a problem and make the next responsible move.

Write before you leave

1. One idea I can now explain clearly
2. One workflow I can now apply
3. One mistake I will avoid
4. One skill I still need to practice
5. One question I want answered before projects

Make the next practice specific

MY PLAN I need to improve [SKILL]. I will practice it by [SMALL ACTION] using [SAFE EXAMPLE]. I will know I improved when [VISIBLE EVIDENCE].

Small

Observable

Repeatable

You do not need to remember everything. You need to know how to think, check, and improve.

Explain simply

Choose wisely

Prompt clearly

Verify carefully

Improve from evidence

Celebrate revision

Print / Save PDF

Final class call-and-response

AI gives us?

A useful draft.

Humans give it?

Purpose, judgment, checking, and responsibility.
