

# Prompt it. Repair it. Design with it.

Today we learn how image prompting actually works, how to create different types of images, how to restore low-quality visuals, and how to turn generated images into polished graphics and banners.

Image prompts

High quality outputs

Restoration

Graphic design

Copy-ready prompts

## Final output

A reusable prompt toolkit plus at least three finished assets: one restored image, one creative image, and one banner or poster graphic.

## Skill stack

1. Understand how image prompting works.
2. Generate different image types and styles.
3. Use references without copying blindly.
4. Restore, upscale, and clean poor images.
5. Edit only one part of an image with prompt instructions.
6. Create banners, thumbnails, and social graphics.

## Hands-on outputs

1. One photo-style image.
2. One illustration or character image.
3. One restored or enhanced image.
4. One banner or promotional graphic.
5. One localized edit using a specialized prompt.
6. One personal prompt library.

# High quality images come from a clear production path.

**Rule:** A prompt is a creative brief. The clearer the brief, the less random the image.

● ● ● BEFORE PROMPTING, CHOOSE THESE

### Image purpose

Profile photo, ad banner, product image, thumbnail, poster, concept art, restoration, or edit.

### Subject

Person, product, building, food, object, character, landscape, interface, or abstract idea.

### Audience

Customers, students, parents, kids, founders, community members, or a specific niche.

### Visual style

Realistic photo, 3D render, editorial graphic, vector art, watercolor, anime-inspired, or clean UI.

### Reference

Own photo, product image, logo, color palette, composition sample, or no reference.

### Output format

Square post, story, YouTube thumbnail, website hero, print poster, transparent PNG, or wallpaper.

Clear constraints make outputs easier to reuse

Slide 4

# Choose the image family before choosing fancy words.

## Realistic photo

Best for people, places, products, food, events, lifestyle campaigns, and believable scenes.

## Product or studio render

Best for clean ecommerce visuals, packaging mockups, app devices, and object-focused hero images.

## Illustration or character

Best for education, storytelling, kid-friendly content, mascots, explainers, and concept visuals.

## Graphic or banner

Best for posters, social ads, website headers, thumbnails, event announcements, and offers.

## Restoration or enhancement

Best for old photos, blurry images, low-resolution screenshots, damaged memories, and noisy scans.

## Localized image edit

Best when the image is mostly right and only one object, background, color, pose, or expression should change.

## STEP 1 | MASTER PROMPT

**COPY-READY MASTER PROMPT** Act as a senior AI image director, photographer, and graphic designer.

Create one high-quality image for [PURPOSE] about [SUBJECT] for [AUDIENCE].

Image type:

- [REALISTIC PHOTO / PRODUCT RENDER / CHARACTER ILLUSTRATION / SOCIAL MEDIA BANNER / POSTER / WEBSITE HERO / THUMBNAIL / RESTORATION / LOCALIZED EDIT]

Visual direction:

- Main subject: [WHO OR WHAT MUST APPEAR]  
- Setting/background: [LOCATION OR BACKDROP]  
- Style: [PHOTO / 3D / VECTOR / EDITORIAL / MINIMAL / PREMIUM / PLAYFUL / CINEMATIC]  
- Composition: [CLOSE-UP / WIDE / CENTERED / RULE OF THIRDS / LEFT TEXT SPACE / RIGHT TEXT SPACE]  
- Lighting: [SOFT NATURAL / STUDIO / DRAMATIC / BRIGHT CLEAN / GOLDEN HOUR]  
- Color palette: [BRAND COLORS OR MOOD]  
- Aspect ratio: [1:1 / 4:5 / 9:16 / 16:9 / A4 POSTER]  
- Quality target: sharp, clean, high resolution, polished, professional, no clutter.

Reference instruction:

- [NO REFERENCE / USE MY UPLOADED IMAGE FOR IDENTITY OR PRODUCT CONSISTENCY / USE MY LOGO ONLY AS BRAND COLOR REFERENCE]

Strict rules:

- Do not add random text, subtitles, watermarks, distorted logos, extra fingers, or messy details.  
- If text is needed, leave clean empty space and tell me where to add it manually.  
- Keep the image family-friendly and suitable for public use.  
- Preserve identity, product shape, and brand colors when a reference is provided.

## How learners use it

1. Replace every bracket.
2. Keep only the lines that matter.
3. Paste into Gemini, ChatGPT, Canva, or another image tool.
4. Generate 2-4 options.
5. Use a repair prompt instead of starting over.

## Copy master prompt

PURPOSE

website hero banner for a bakery

AUDIENCE

local customers

MAIN SUBJECT

fresh cakes on a clean counter

IMAGE TYPE

social media banner

VISUAL STYLE

premium realistic studio photo

REFERENCE

no reference image

ASPECT RATIO

16:9 website banner

COMPOSITION

subject on left, empty text space on right

QUALITY OR BRAND INSTRUCTION

Warm, modern, clean, high resolution, no readable text inside the image.

Build image prompt

Act as a senior AI image director, photographer, and graphic designer.

Create one high-quality social media banner for website hero banner for a bakery.

Audience:  
local customers

Main subject:  
fresh cakes on a clean counter

Visual style:  
premium realistic studio photo

Reference instruction:  
no reference image

Aspect ratio:  
16:9 website banner

Composition:  
subject on left, empty text space on right

Quality and brand instruction:  
Warm, modern, clean, high resolution, no readable text inside the image.

Copy generated prompt

## The model builds a visual probability map.

It does not read your mind. It combines patterns from your words: subject, style, composition, lighting, context, and restrictions.

Subject

Style

Composition

Lighting

Constraints

## Why prompts fail

1. The subject is vague.
2. The style words conflict.
3. Too many ideas compete.
4. The image needs readable text.
5. The edit instruction changes the whole image.
6. The reference instruction is unclear.

## ● ● ● THE PROMPT FORMULA

**REUSABLE FORMULA** [IMAGE TYPE] of [MAIN SUBJECT], doing/appearing [ACTION OR STATE], in/against [SETTING OR BACKGROUND].

Style:  
[PHOTO / 3D / ILLUSTRATION / GRAPHIC / VECTOR / CINEMATIC / MINIMAL]

Composition:  
[CAMERA ANGLE], [FRAMING], [WHERE THE SUBJECT SITS], [EMPTY SPACE FOR TEXT IF NEEDED]

Quality:  
[LIGHTING], [COLOR PALETTE], [DETAIL LEVEL], [MOOD], [ASPECT RATIO]

Reference:  
[WHAT TO PRESERVE FROM UPLOADED IMAGE]

Do not:  
[TEXT, WATERMARKS, DISTORTIONS, EXTRA OBJECTS, STYLE CONFLICTS]

### Why this format works

- It separates creative decisions.
- It makes edits easier.
- It supports any image tool.
- It leaves room for manual design text.
- It avoids one long confusing sentence.

**Copy prompt formula**

● ● ● **EXAMPLE | STRONG IMAGE PROMPT**

**READY-TO-USE EXAMPLE** Realistic premium studio photo of fresh chocolate cakes and colorful cupcakes arranged on a clean wooden bakery counter.

**Composition:**

Wide 16:9 website hero image, main cakes on the left third, clean empty warm background space on the right for a headline to be added later, eye-level camera, shallow depth of field.

**Style and quality:**

Soft natural window light, warm modern bakery mood, appetizing texture, clean surfaces, high resolution, sharp focus on the front cake, subtle pastel color palette.

**Brand direction:**

Friendly local bakery, premium but approachable, no visible brand logo.

**Do not add:**

Readable text, labels, price tags, watermark, messy crumbs, extra hands, distorted cake shapes, or harsh shadows.

Subject, composition, quality, and restrictions work together.

## ● ● ● STEP 2 | SINGLE IMAGE TEMPLATE

**COPY-READY IMAGE PROMPT TEMPLATE** Create one high-quality [IMAGE TYPE] for [PURPOSE].

Main subject:

[WHO OR WHAT SHOULD BE VISIBLE]

Scene or background:

[WHERE IT IS / WHAT SURROUNDS IT]

Style:

[REALISTIC PHOTO / PRODUCT RENDER / ILLUSTRATION / GRAPHIC DESIGN / MINIMAL VECTOR / CINEMATIC]

Composition:

[ASPECT RATIO], [CAMERA ANGLE], [SUBJECT PLACEMENT], [EMPTY SPACE FOR TEXT IF NEEDED]

Quality:

Sharp, high resolution, professional lighting, clean details, balanced colors, polished finish.

Reference instruction:

[WHAT TO PRESERVE FROM UPLOADED IMAGE, OR "NO REFERENCE IMAGE"]

Do not add:

Readable text, captions, watermarks, distorted logos, extra people, extra fingers, clutter, or random objects.

### Step in class

1. Pick the image type.
2. Replace every bracket.
3. Generate 2-4 options.
4. Compare composition and quality.
5. Repair only the best option.
6. Save final image with a clear name.

**Copy image prompt template**

● ● ● USING UPLOADED IMAGES AS REFERENCE

### Character reference

Upload a character sheet or best previous image. Ask for the same face, outfit, colors, and proportions.

### Product reference

Upload your product photo. Ask the tool to keep the product shape, color, and key details recognizable.

### Brand reference

Upload logo or brand guide only if allowed. Ask for subtle colors or background presence, not heavy promotion.

### Style reference

Use style references carefully. Avoid copying a living artist or copyrighted show style directly.

### Scene reference

Upload a room, school, office, or background image. Ask to preserve layout, mood, or color only.

### No reference

Ask for an original consistent design and reuse the best generated frame as the future reference.

## ● ● ● REFERENCE IMAGE PROMPT

**COPY-READY REFERENCE PROMPT** Use the uploaded image as a visual reference for  
[CHARACTER / OBJECT / PRODUCT / LOCATION].

Keep these consistent:

- Overall shape and proportions.
- Main colors.
- Important visible details.
- Mood and personality.
- Outfit or surface design if relevant.

Change these as needed for the new image:

- Pose and action.
- Camera angle.
- Background.
- Lighting.
- Facial expression.

Do not add subtitles, captions, labels, or readable text inside the image.

Do not change the identity of the character/object/product.

Create the image in this style: [ART STYLE].

Image to generate:

[PASTE IMAGE DESCRIPTION]

### Good reference habit

After generating one strong image, reuse it as a reference for future versions, matching products, character consistency, or brand style.

#### Copy reference prompt

## REPAIR BAD IMAGES FAST

### IMAGE REPAIR PROMPT

Regenerate this image with the following fixes while keeping the same subject, style, layout, and composition:

Problems to fix:

- [PROBLEM 1]
- [PROBLEM 2]
- [PROBLEM 3]

Keep:

- [WHAT IS WORKING]

Change:

- [WHAT MUST CHANGE]

Important rules:

- No subtitles, captions, labels, logos, watermarks, or readable text inside the image.
- Keep hands, face, eyes, and proportions clean.
- Keep the main character/object consistent with the reference.
- Make the image simple, clear, and usable as a final graphic or design asset.

### Common fixes

Remove text

Fix hands

Same outfit

Cleaner background

More emotion

Less clutter

**Copy repair prompt**

## Folder structure

```
day13-images/  
  prompts/  
    image-master-prompt.txt  
    repair-prompts.txt  
  source-images/  
    original-reference.jpg  
    old-photo-before.jpg  
  generated/  
    bakery-hero-v01.png  
    product-render-v01.png  
    character-v01.png  
  final/  
    bakery-hero-final.png  
    restored-photo-final.png  
    social-banner-final.png
```

## File naming rule

1. Name by purpose, not "download 1".
2. Keep originals separate from final files.
3. Save the prompt that created each final image.
4. Use PNG for graphics and transparent assets.
5. Use JPG for photo exports when file size matters.

Organized files make future edits faster

# Restoration works best when you ask for preservation first, enhancement second.

1

## Upload

Use the clearest original file.

2

## Preserve

Name identity, pose, clothing, and era.

3

## Repair

Fix scratches, blur, noise, fading, or tears.

4

## Enhance

Sharpen face, restore contrast, improve light.

5

## Respect

Do not invent new features.

6

## Upscale

Export higher resolution after repair.

7

## Compare

Check before and after closely.

**Restoration rule:** keep the person or object recognizable. A prettier face that changes identity is a failed restoration.

## ● ● ● COPY-READY RESTORATION PROMPT

**RESTORE AND ENHANCE** Restore this uploaded image in high quality while preserving the original identity, pose, clothing, object shapes, and overall memory.

### Fix:

- Blur, low resolution, compression noise, scratches, dust, stains, fading, and uneven lighting.

### Enhance:

- Natural sharpness, realistic skin or surface texture, balanced contrast, clean background, and clear facial or product details.

### Do not change:

- Face shape, age, expression, clothing design, product shape, body proportions, original era, or important objects.

### Do not add:

- New people, decorative effects, fake text, heavy beauty filters, unrealistic colors, watermark, or artificial-looking skin.

### Output:

A natural high-resolution restored version that still looks like the same original image.

## Restoration checks

1. Does the face or product still match?
2. Did it invent details?
3. Are eyes, hands, and edges natural?
4. Is the image too smooth?
5. Is the final size useful?

### Copy restoration prompt

## ● ● ● HIGH-QUALITY UPSCALE AND CLEANUP

**UPSCALE PROMPT** Upscale and enhance this image for professional use.

### Target quality:

- High resolution, crisp subject edges, clean texture, realistic detail, balanced contrast, accurate colors, and no compression artifacts.

### Preserve:

- Original composition, identity, product shape, clothing, background layout, logo placement if present, and overall mood.

### Fix only:

- Noise, pixelation, blur, dull colors, small scratches, harsh shadows, and low contrast.

### Do not:

- Change the face, product design, text, logo, pose, camera angle, background objects, or overall style.

If any readable text or logo is unclear, do not invent it. Keep it blank or preserve the original as closely as possible.

## Use when

Old photos

Low-res product shots

Screenshots

Event images

Portfolio visuals

Print assets

**Copy upscale prompt**

● ● ● **PROMPT RECIPES FOR DIFFERENT IMAGE TYPES**

### **Realistic photo**

Realistic documentary-style photo of [subject] in [setting], natural light, authentic emotion, 35mm lens look, shallow depth of field, high detail, no text.

### **Product render**

Premium studio product render of [product], clean background, softbox lighting, subtle shadow, accurate shape and material, ecommerce-ready, high resolution.

### **Character**

Friendly original character of [subject], consistent outfit and proportions, expressive face, clean illustration style, simple background, no copyrighted style.

### **Poster**

Modern poster background for [event/topic], bold visual metaphor, strong focal point, clean empty headline area, high contrast, no generated text.

### **Thumbnail**

YouTube thumbnail background about [topic], dramatic clear subject, strong emotion, simple composition, high contrast, room for large manual title text.

### **Transparent asset**

Isolated [object] as a clean transparent-background PNG asset, centered, crisp edges, realistic shadow removed, no background, no text.

## Best workflow

1. Generate the background or hero visual without text.
2. Leave clean space for headline and logo.
3. Open the image in Canva, Figma, PowerPoint, or Adobe Express.
4. Add real text, logo, buttons, and shapes manually.
5. Check mobile crop and readability.
6. Export the correct size.

## Why not ask AI for the final banner?

Image tools often make bad spelling, distorted logos, and unreadable layout. Use AI for the visual foundation; use a design editor for exact text and branding.

AI image first

Manual typography

Real logo

Correct size

## COPY-READY BANNER BACKGROUND PROMPT

**BANNER BACKGROUND** Create a high-quality [BANNER TYPE] background for [BRAND / EVENT

/ PRODUCT / TOPIC].

Main visual:  
[DESCRIBE SUBJECT OR METAPHOR]

Layout:  
[ASPECT RATIO], subject on [LEFT/CENTER/RIGHT], clean empty space on  
[LEFT/RIGHT/TOP/BOTTOM] for manually added headline, logo, and call-to-action.

Style:  
[MODERN / PREMIUM / PLAYFUL / EDUCATIONAL / CORPORATE / FESTIVE], [COLOR PALETTE], clean  
lighting, strong contrast, professional composition.

Quality:  
High resolution, crisp details, balanced colors, simple background, readable negative  
space.

Do not include:  
Any readable text, fake logo, watermark, UI buttons, price, phone number, random icons,  
distorted hands, or clutter.

Output only the background image.

## Good sizes

|                   |              |
|-------------------|--------------|
| Website hero      | 16:9 or 21:9 |
| Instagram post    | 1:1 or 4:5   |
| Story/Reel cover  | 9:16         |
| YouTube thumbnail | 16:9         |
| Poster            | A4 vertical  |

### Copy banner prompt

● ● ● HOW TO CREATE HIGH-QUALITY GRAPHICS NICELY

### One focal point

Do not make every object important. The viewer should know where to look first.

### Clean negative space

Leave calm areas for headline, logo, product name, or call-to-action.

### Controlled palette

Use 2-4 main colors with enough contrast. Match brand colors when needed.

### Real typography later

Add readable text manually in a design editor. Do not trust generated text.

### Right crop

Generate or edit for the actual platform ratio before final export.

### Final inspection

Zoom in for hands, faces, product details, logos, spelling, and edge artifacts.

## ● ● ● EDIT ONE PART WITHOUT AFFECTING THE WHOLE IMAGE

**LOCALIZED EDIT PROMPT** Edit only the selected area: [OBJECT / BACKGROUND PART / CLOTHING / COLOR / EXPRESSION / LIGHTING].

Change:  
[EXACT CHANGE YOU WANT]

Keep everything else unchanged:

- Same person or product identity.
- Same pose, camera angle, composition, background layout, lighting direction, colors, and image style.
- Same facial features, clothing shape, object proportions, and surrounding details.

Do not regenerate the whole image.

Do not add new objects, text, watermark, logo, people, hands, or decoration.

Blend the edit naturally so it matches the original image quality and lighting.

### Specialized examples

- Change only shirt color.
- Remove only background clutter.
- Replace only sky or wall.
- Brighten only face or product.
- Make only one object larger.
- Keep the rest pixel-for-pixel similar.

**Copy localized edit prompt**
