

Script it. Frame it. Animate it.

These two days turn one idea into a short visual story: first with scripts and images, then with generated video clips.

Script writing

Image prompts

Reference images

Flow workflow

Copy-ready prompts

Final output

One 30-45 second short video with consistent visuals, scene cards, animation directions, and voiceover.

Day 13: Image production

1. Choose a video idea.
2. Write the short script.
3. Break it into scenes.
4. Define the visual style.
5. Create consistent image prompts.
6. Generate and download scene images.

Day 14: Video generation

1. Open Flow or another video tool.
2. Upload scene images as start/end frames.
3. Paste the scene description, animation, and voiceover.
4. Generate short clips.
5. Review, repair, and export.
6. Combine clips into one story.

Every good AI video starts before the video tool opens.

Rule: Keep the same scene card beside you from image generation to video generation.

● ● ● BEFORE PROMPTING, CHOOSE THESE

Video type

Explainer, story, product demo, awareness message, lesson, reel, or ad concept.

Audience

Kids, parents, students, customers, teachers, founders, or general public.

Language

Nepali, English, Hindi, bilingual, or another language.

Visual style

2D cartoon, close-to-human, fruit characters, superhero, 3D toy, paper cutout.

Reference

Own image, character sheet, brand colors, product photo, logo, or no reference.

Brand presence

None, subtle watermark, background sticker, color palette, or end-card mention.

Give learners style choices instead of one fixed example.

Clean 2D cartoon explainer

Friendly characters, simple shapes, readable scenes, soft colors. Best for education and social media.

Close-to-human animated style

Realistic proportions, expressive face, modern clothes. Best for relatable workplace or life stories.

Fruit or object characters

Objects act like characters. Best for fun reels, food brands, kids' content, and metaphor stories.

Superhero or monster energy

Bold poses, transformation, exaggerated power. Best for hooks, challenges, and dramatic comparison videos.

3D toy or clay style

Miniature characters, tactile lighting, playful movement. Best for product explainers and kid-friendly shorts.

Minimal infographic animation

Icons, simple scenes, abstract objects. Best when people are not needed and clarity matters most.

● ● ● STEP 1 | MASTER PROMPT

COPY-READY MASTER PROMPT Act as a professional short-form visual storytelling director and AI production planner.

Create a short [LANGUAGE] video about [TOPIC] for [AUDIENCE]. The video type is [VIDEO TYPE], such as educational explainer, product demo, awareness story, classroom lesson, brand reel, comedy scene, or mini story.

Visual direction:

- Art style: [ART STYLE]
- Character type: [HUMAN / CLOSE-TO-HUMAN / FRUIT OR OBJECT CHARACTER / SUPERHERO / 3D TOY / MINIMAL INFOGRAPHIC]
- Color palette: [COLOR PALETTE]
- Setting style: [MODERN OFFICE / HOME / CAFE / SCHOOL / CITY / FANTASY / PRODUCT STUDIO]
- Reference image use: [NO REFERENCE / USE MY UPLOADED IMAGE FOR CHARACTER CONSISTENCY / USE MY UPLOADED PRODUCT IMAGE / USE MY BRAND COLORS]
- Brand presence: [NONE / SUBTLE BACKGROUND / SMALL WATERMARK / END-CARD MENTION]

Strict rules:

- Keep the output simple, visual, and easy to understand.
- Do not sound like a sales pitch unless I explicitly ask for an ad.
- Do not add subtitles, captions, labels, logos, or readable text inside generated images or video frames. AI often creates poor text. Leave clean space if text will be added manually later.
- Maintain the same main character, object, or product style across all scenes.
- Do not use internal body visuals unless the topic requires it and I approve.
- Keep the content family-friendly.

Video structure:

- Exactly [SCENE COUNT] scenes.
- Each scene should last [DURATION PER SCENE] seconds.

How learners use it

1. Replace every bracket.
2. Paste into Gemini, ChatGPT, Claude, or another planner.
3. Choose one idea from the list.
4. Ask it to continue with full scene cards.

Copy master prompt

TOPIC

why websites become slow

BRAND OR SPECIAL INSTRUCTION

Subtle authority only. No direct promotion.

Build master prompt

Act as a professional short-form visual storytelling director and AI production planner.

Create a short Nepali video about why websites become slow for small business owners. The video type is short educational explainer.

Visual direction:

- Art style: clean 2D cartoon explainer
- Character type: choose the best character/object format for this topic and keep it consistent
- Color palette: soft, clean, modern, and high contrast
- Setting style: choose a relatable setting for the audience
- Reference image use: no reference image
- Brand presence or special instruction: Subtle authority only. No direct promotion.

Strict rules:

- Keep the output simple, visual, and easy to understand.
- Do not sound like a sales pitch unless I explicitly ask for an ad.
- Do not add subtitles, captions, labels, logos, watermarks, or readable text inside generated images or video frames. AI often creates poor text. Leave clean space if text will be added manually later.
- Maintain the same main character, object, or product style across all scenes.
- Keep the content family-friendly.

Video structure:

- Exactly 6 scenes.
- Each scene should last 6-8 seconds.

Copy generated prompt

Why script first?

Images should serve the voiceover. If the script is unclear, the visuals become random.

Hook

Problem

Simple explanation

Example

Takeaway

SCRIPT PROMPT Write a short [LANGUAGE] voiceover script for a [TOTAL LENGTH] video about [TOPIC] for [AUDIENCE].

Rules:

- Use simple spoken language.
- Start with a curiosity hook.
- Explain one idea only.
- Avoid heavy jargon.
- Keep each scene line short enough for [DURATION PER SCENE] seconds.
- Make the final line useful and natural.
- Do not make it sound promotional unless the video is explicitly an ad.

Output exactly [SCENE COUNT] voiceover lines, labeled Scene 1 to Scene [SCENE COUNT].

● ● ● STEP 3 | PRODUCTION CARD FORMAT

SCENE CARD FORMAT Use this format for every scene so I can copy it into image and video tools easily.

Scene [NUMBER] Production Card

Scene Description:

[Describe what we see. Include character action, setting, emotion, and key visual metaphor.]

Image Prompt:

[A clean image-generation prompt for this exact frame. Include art style, character consistency, environment, lighting, composition, and no text inside the image.]

Animation:

[Describe 6-8 seconds of motion. Include character movement, object movement, camera movement, and mood. Keep motion smooth and minimal.]

VoiceOverScript:

[One short spoken line for this scene in the chosen language.]

Reference Notes:

[Mention uploaded image, character sheet, product photo, brand colors, or "no reference".]

Why this format works

- Scene Description helps planning.
- Image Prompt helps Gemini or image tools.
- Animation helps Flow or video tools.
- VoiceOverScript keeps timing clear.
- Reference Notes protect consistency.

Copy scene card format

● ● ● EXAMPLE | ONE SCENE CARD

EXAMPLE PRODUCTION CARD Scene 1 Production Card

Scene Description:

A friendly young shop owner looks confused at a laptop because the website loading circle keeps spinning. The shop is modern, clean, and relatable. The mood is curious, not stressful.

Image Prompt:

Clean 2D cartoon explainer style, friendly young Nepali shop owner in modern casual clothes sitting at a small shop counter with a laptop, website loading circle on screen shown as a simple icon shape without readable text, soft pastel Asian-inspired color palette, warm indoor lighting, expressive confused face, modern shop background, consistent character design, animated frame look, no subtitles, no captions, no readable text.

Animation:

6-8 seconds. The camera slowly pushes in. The character taps the laptop, the loading circle spins, and the character raises one eyebrow in confusion. Keep motion smooth and minimal.

VoiceOverScript:

"Website खोल खोज्दा घुमेको घुमै हुन्छ, हैन?"

Reference Notes:

Image frame, motion, and voiceover stay linked.

● ● ● STEP 4 | IMAGE GENERATION PROMPT TEMPLATE

COPY-READY IMAGE PROMPT TEMPLATE Create one image for Scene [NUMBER] of a short video.

Scene:
[PASTE SCENE DESCRIPTION]

Voiceover context:
[PASTE VOICEOVER SCRIPT]

Visual style:
[PASTE ART STYLE, CHARACTER TYPE, COLOR PALETTE, AND SETTING]

Character consistency:
Use the same main character/object/product as previous scenes. Keep face, outfit, colors, proportions, and overall design consistent.

Reference image instruction:
[IF UPLOADED: Use the uploaded image as a reference for character/object/product consistency. Do not copy copyrighted style unless I own or have permission to use it.]
[IF NOT UPLOADED: No reference image. Create a consistent original design.]

Image rules:
- Show only one clear moment from the scene.
- Make it look like a clean animated frame.

Step in class

1. Copy one scene's image prompt.
2. Open a new Gemini tab or image tool tab.
3. Paste the prompt.
4. Generate 2-4 options.
5. Download the best image.
6. Repeat for every scene.

Copy image prompt template

● ● ● USING UPLOADED IMAGES AS REFERENCE

Character reference

Upload a character sheet or best previous image. Ask for the same face, outfit, colors, and proportions.

Product reference

Upload your product photo. Ask the tool to keep the product shape, color, and key details recognizable.

Brand reference

Upload logo or brand guide only if allowed. Ask for subtle colors or background presence, not heavy promotion.

Style reference

Use style references carefully. Avoid copying a living artist or copyrighted show style directly.

Scene reference

Upload a room, school, office, or background image. Ask to preserve layout, mood, or color only.

No reference

Ask for an original consistent design and reuse the best generated frame as the future reference.

● ● ● REFERENCE IMAGE PROMPT

COPY-READY REFERENCE PROMPT Use the uploaded image as a visual reference for
[CHARACTER / OBJECT / PRODUCT / LOCATION].

Keep these consistent:

- Overall shape and proportions.
- Main colors.
- Important visible details.
- Mood and personality.
- Outfit or surface design if relevant.

Change these as needed for the new scene:

- Pose and action.
- Camera angle.
- Background.
- Lighting.
- Facial expression.

Do not add subtitles, captions, labels, or readable text inside the image.

Do not change the identity of the character/object/product.

Create the image in this style: [ART STYLE].

Scene to generate:

[PASTE SCENE DESCRIPTION]

Good reference habit

After generating Scene 1, use the best Scene 1 image as the reference for Scene 2. This usually improves consistency.

Copy reference prompt

● ● ● REPAIR BAD IMAGES FAST

IMAGE REPAIR PROMPT Regenerate this image with the following fixes while keeping the same character, style, scene, and composition:

Problems to fix:

- [PROBLEM 1]
- [PROBLEM 2]
- [PROBLEM 3]

Keep:

- [WHAT IS WORKING]

Change:

- [WHAT MUST CHANGE]

Important rules:

- No subtitles, captions, labels, logos, watermarks, or readable text inside the image.
- Keep hands, face, eyes, and proportions clean.
- Keep the main character/object consistent with the reference.
- Make the image simple, clear, and usable as a video start frame.

Common fixes

Remove text

Fix hands

Same outfit

Cleaner background

More emotion

Less clutter

Copy repair prompt

Folder structure

```
video-project/  
  01-script.txt  
  02-scene-cards.txt  
  images/  
    scene-01-start.png  
    scene-02-start.png  
    scene-03-start.png  
    scene-04-start.png  
    scene-05-start.png  
    scene-06-start.png  
  video-clips/  
  final-export/
```

File naming rule

1. Use scene numbers.
2. Keep selected images only.
3. Save the scene card text.
4. Do not mix drafts with final frames.
5. Use the same names when uploading to Flow.

Organized files reduce mistakes on Day 14

Turn each image into a short clip.

1

Open Flow

Or any image-to-video tool.

2

Upload frame

Use start image or start/end images.

3

Paste scene

Use the Scene Description.

4

Paste motion

Use the Animation line.

5

Check script

Keep voiceover timing nearby.

6

Generate

Create 6-8 second clip.

7

Review

Repair or regenerate.

● ● ● STEP 6 | VIDEO GENERATION PROMPT TEMPLATE

COPY-READY VIDEO PROMPT Create a [DURATION] second video clip from the uploaded image frame.

Scene Description:
[PASTE SCENE DESCRIPTION]

Animation:
[PASTE ANIMATION PROMPT]

VoiceOverScript:
[PASTE VOICEOVER SCRIPT]

Motion rules:

- Keep the character/object/product consistent with the uploaded image.
- Use smooth, minimal motion.
- Avoid changing the main character's face, outfit, or object design.
- Do not add subtitles, captions, labels, logos, watermarks, or readable text.
- Do not create extra fingers, distorted faces, or distracting background changes.
- Keep camera movement simple: [STATIC / SLOW PUSH-IN / SLOW PAN / GENTLE ZOOM / TRACKING SHOT].
- Make the clip feel like one continuous animated scene.

Output goal:
A clean clip that can be combined with the other scenes in a 30-45 second short video.

Paste into Flow

1. Upload scene image.
2. Select start frame or start/end frame.
3. Paste this prompt.
4. Replace the three blocks from the scene card.
5. Generate the clip.

Copy video prompt template

● ● ● **START FRAME AND END FRAME CHOICES**

Start frame only

Use when the scene has simple movement and you want the tool to decide the ending.

Start and end frame

Use when the character must move from one clear pose or position to another.

Same image twice

Use when you want subtle camera motion, blinking, breathing, or gentle object movement.

Different angle end frame

Use carefully. Big angle changes can cause identity drift or strange transitions.

Product scene

Use stable frames. Ask for slow rotation, hand movement, light sweep, or camera push.

Character scene

Keep movement small: gesture, turn head, point, walk a few steps, react.

● ● ● ANIMATION PROMPT PATTERNS

Explainer

6-8 seconds. Slow camera push-in. The character points at the laptop, nods, and a simple visual metaphor appears beside them. Keep motion smooth and minimal.

Product

6-8 seconds. The camera slowly circles the product by a few degrees. Soft light moves across the surface. Keep product shape and logo unchanged. No text.

Fruit character

6-8 seconds. The fruit character bounces gently, looks surprised, then smiles. Background objects move slightly. Keep face and body design consistent.

Superhero

6-8 seconds. The character takes a confident step forward, cape moves gently, camera tilts upward slightly, energy glow appears in the background. No readable text.

Close-to-human

6-8 seconds. The character looks at the phone, reacts with a small smile, and turns toward camera. Natural movement, no face distortion, no extra people.

Infographic

6-8 seconds. Icons move from left to right in a simple sequence. Camera remains static. Use clean motion and no text labels.

REPAIR BAD VIDEO CLIPS

VIDEO REPAIR PROMPT Regenerate the clip using the same uploaded image and same scene idea.

Fix these problems:

- [PROBLEM 1]
- [PROBLEM 2]
- [PROBLEM 3]

Keep these parts:

- [WHAT WORKED WELL]

New motion instruction:

[WRITE A SIMPLER, MORE CONTROLLED MOTION]

Strict rules:

- Keep the character/object/product consistent with the uploaded frame.
- Keep camera movement simple.
- Do not add subtitles, captions, labels, watermarks, logos, or readable text.
- Avoid face distortion, extra fingers, melting objects, sudden scene changes, and random extra characters.
- Make the clip usable as one scene in a short video.

If the clip keeps failing

1. Reduce movement.
2. Use same start and end frame.
3. Regenerate the image with cleaner composition.
4. Remove extra characters.
5. Shorten the animation instruction.

Copy video repair prompt

Timing rule

A 6-8 second scene needs one short spoken line. If the line is too long, either split the scene or shorten the words.

One thought

Natural speech

No jargon

Read aloud

TIMING REPAIR PROMPT Shorten this voiceover so it fits naturally in [DURATION] seconds.

Original line:
[PASTE LINE]

Rules:

- Keep the meaning.
- Use simple spoken [LANGUAGE].
- Make it sound natural, not robotic.
- Avoid heavy jargon.
- Return 3 options.
- Mark the best option.

Minimum editing steps

1. Import all clips in scene order.
2. Trim bad starts or endings.
3. Add voiceover or generated audio.
4. Add subtitles manually if needed.
5. Add background music quietly.
6. Export vertical video if posting to short-form platforms.

Final quality check

1. Does every scene match the script?
2. Is the character consistent?
3. Is there any unwanted text?
4. Is the voiceover clear?
5. Is the pacing fast enough?
6. Does the ending feel complete?

Run the day as a production sprint.

Time	Block	Visible output
00:00-00:20	Show pipeline and choose style/video type	Production decisions
00:20-00:50	Use master prompt and choose one idea	Approved idea
00:50-01:25	Script and scene cards	6 production cards
01:25-01:35	Break	Reset
01:35-02:20	Generate and repair images	6 downloaded frames
02:20-02:35	Organize files and open Flow	Ready asset folder
02:35-03:25	Generate video clips scene by scene	6 short clips
03:25-03:45	Repair clips and assemble draft	Rough video
03:45-04:00	Showcase and reflection	Final export or next repair list

A good AI video is planned before it moves.
